

**Draft**

**TOPICAL PLAN  
FOR JINR RESEARCH  
AND INTERNATIONAL COOPERATION  
2021**

## Contents

<b>Theoretical Physics</b> .....	<b>7</b>
01-3-1135-2019/2023 .....	
Fundamental Interactions of Fields and Particles .....	
D.I. Kazakov, O.V. Teryaev .....	8
01-3-1136-2019/2023 .....	
Theory of Nuclear Systems .....	
N.V. Antonenko, S.N. Ershov, A.A. Dzhioev .....	16
01-3-1137-2019/2023 .....	
Theory of Complex Systems and Advanced Materials .....	
V.A. Osipov, A.M. Povolotskii .....	21
01-3-1138-2019/2023 .....	
Modern Mathematical Physics: Gravity, Supersymmetry and Strings .....	
A.P. Isaev, S.O. Krivonos, A.S. Sorin .....	26
01-3-1117-2014/2023 .....	
Dubna International Advanced School of Theoretical Physics (DIAS-TH) .....	
V.V. Voronov, A.S. Sorin .....	31
<b>Elementary Particle Physics and Relativistic Nuclear Physics</b> .....	<b>35</b>
02-2-1123-2015/2022 .....	
Study of Fundamental Interactions in $e^+e^-$ Collisions .....	
A.S. Zhemchugov .....	36
02-0-1081-2009/2024 .....	
ATLAS Upgrade of the ATLAS Detector and Physics Research at the LHC .....	
V.A. Bednyakov .....	38
02-2-1144-2021/2023 .....	
Search for New Physics in the Charged Lepton Sector .....	
V.V. Glagolev, Z. Tsamalaidze .....	41
02-2-1099-2010/2023 .....	
Study of Neutrino Oscillations .....	
D.V. Naumov, A.G. Olshevsky .....	45
02-0-1108-2011/2021 .....	
PANDA Experiment at FAIR .....	
G.D. Alexeev .....	48
02-2-1125-2015/2023 .....	
Astrophysical Researches with the TAIGA Experiment .....	
A.N. Borodin .....	49
02-1-1106-2011/2022 .....	
Investigations of Compressed Baryonic Matter at the GSI Accelerator Complex .....	
V.P. Ladygin, V.V. Ivanov .....	51
02-1-1096-2010/2022 .....	
Study of Rare Charged Kaon Decays and Search for Dark Sector in Experiments at the CERN SPS .....	
V.D. Kekelidze, Yu.K. Potrebenikov .....	53
02-0-1083-2009/2022 .....	
CMS. Compact Muon Solenoid at the LHC .....	
A.V. Zarubin .....	56
02-0-1085-2009/2022 .....	
Studies of the Nucleon and Hadron Structure at CERN .....	
A.P. Nagaytsev .....	62
02-1-1086-2009/2023 .....	
Strangeness in Hadronic Matter and Study of Inelastic Reactions Near Kinematical Borders .....	
E.A. Stokovsky, E.S. Kokoulina, D.O. Krivenkov .....	65

02-0-1065-2007/2023 .....	NICA Complex: Design and Construction of the Complex of Accelerators, Collider and Physics Experimental Facilities at Extracted and Colliding Ion Beams Aimed at Studying Dense Baryonic Matter and the Spin Structure of Nucleons and Light Ions, and at Carrying out Applied and Innovation Projects.....	
	V.D. Kekelidze, A.S. Sorin, G.V.Trubnikov .....	68
02-0-1127-2016/2023 .....	Advanced Studies on Systems of New-Generation Accelerators and Colliders for Fundamental and Applied Research.....	
	G.D. Shirkov.....	80
02-1-1097-2010/2021 .....	Study of Polarization Phenomena and Spin Effects at the JINR Nuclotron-M Facility .....	
	A.D. Kovalenko.....	83
02-1-1087-2009/2023 .....	Research on Relativistic Heavy and Light Ion Physics. Experiments at the Accelerator Complex Nuclotron/NICA at JINR and CERN SPS.....	
	A.I. Malakhov.....	87
02-0-1066-2007/2023 .....	Investigation of the Properties of Nuclear Matter and Particle Structure at the Collider of Relativistic Nuclei and Polarized Protons .....	
	R. Lednicky, Yu.A. Panebratsev .....	92
02-1-1088-2009/2022 .....	ALICE. Study of Interactions of Heavy Ion and Proton Beams at the LHC .....	
	A.S. Vodopyanov .....	95
02-1-1107-2011/2021 .....	Development and Construction of the Prototype of a Complex for Radiotherapy and Applied Research with Heavy-Ion Beams at the Nuclotron-M .....	
	S.I. Tyutyunnikov.....	100
<b>Nuclear Physics .....</b>		<b>103</b>
03-0-1129-2017/2021 .....	Development of the FLNR Accelerator Complex and Experimental Setups (DRIBS-III).....	
	G.G. Gulbekyan, S.N. Dmitriev, M.G. Itkis .....	104
03-5-1130-2017/2021 .....	Synthesis and Properties of Superheavy Elements, Structure of Nuclei at the Limits of Nucleon Stability .....	
	M.G. Itkis .....	108
03-2-1100-2010/2021 .....	Non-Accelerator Neutrino Physics and Astrophysics .....	
	V.B. Brudanin, A. Kovalik, E.A. Yakushev .....	112
03-4-1128-2017/2022 .....	Investigations of Neutron Nuclear Interactions and Properties of the Neutron .....	
	E.V. Lychagin.....	117
<b>Condensed Matter Physics, Radiation and Radiobiological Research .....</b>		<b>123</b>
04-4-1142-2021/2025 .....	Investigations of functional materials and nanosystems using neutron scattering.....	
	D.P. Kozlenko, V.L. Aksenov, A.M. Balagurov .....	124
04-4-1105-2011/2022 .....	Development of the IBR-2 Facility with a Complex of Cryogenic Neutron Moderators.....	
	A.V. Vinogradov, A.V. Belushkin, A.V. Dolgikh.....	132

04-4-1143-2021/2025 .....	Scientific and methodological research and developments for condensed matter investigations with IBR-2 neutron beams .....	
	V.I. Bodnarchuk, V.I. Prikhodko .....	134
04-4-1133-2018/2023 .....	Modern Trends and Developments in Raman Microspectroscopy and Photoluminescence for Condensed Matter Studies.....	
	G.M. Arzumanyan, N. Kučerka.....	138
04-4-1140-2020/2022 .....	Development of the Conceptual Design of a New Advanced Neutron Source at JINR .....	
	V.N. Shvetsov.....	140
04-4-1141-2020/2022 .....	Development of the SOLCRYS Structural Research Laboratory at the SOLARIS National Synchrotron Radiation Centre.....	
	N. Kucerka.....	142
04-5-1131-2017/2021 .....	Radiation Physics, Radiochemistry, and Nanotechnology Investigations Using Beams of Accelerated Heavy Ions.....

<b>Alphabetical List of Collaborations.....</b>		<b>185</b>

All the themes in the Plan are listed by fields of research. Each theme is coded according to the JINR system of classification and contains the following information:

- |                                     |   |   |
|-------------------------------------|---|---|
| the first number*                   | - | the field of research;  |
| the second number **                | - | the conventional number<br>of Laboratory or other Division of JINR; |
| the third number                    | - | the theme's ordinal number;   |
| the fourth and<br>the fifth numbers | - | the years of the activity's beginning<br>and completion.            |

## Fundamental Interactions of Fields and Particles

**Leaders:** D.I. Kazakov  
O.V. Teryaev

### Participating Countries and International organizations:

Argentina, Armenia, Azerbaijan, Belarus, Bulgaria, Canada, CERN, Chile, China, Czech Republic, Finland, France, Georgia, Germany, Hungary, ICTP, India, Italy, Japan, Kazakhstan, Mexico, Mongolia, New Zealand, Norway, Portugal, Poland, Republic of Korea, Russia, Serbia, Slovakia, Spain, Sweden, Switzerland, USA, Ukraine, United Kingdom, Uzbekistan, Vietnam.

### Issues addressed and main goals of research:

The main aim of the research within the theme is the construction of theoretical models and their application to the description of properties of elementary particles and their interactions. This research includes the following directions of activity. The development of quantum field theory formalism in gauge and supersymmetric theories. Construction and investigation of the models of particle physics beyond the Standard Model. Theoretical support of experiments at the Large Hadron Collider on the search of new physics and the study of the properties of the Higgs boson. Calculation of radiative corrections to the processes of particle creation within the Standard Model and its extensions. Investigation of neutrino properties and neutrino oscillations. Investigation of the hadron properties within quantum chromodynamics and phenomenological quark models. Study of the hadron spin structure with the help of generalized and transverse momentum dependent parton distributions and theoretical support of NICA/SPD program. Study of heavy quark properties and exotic hadrons. Lattice simulations for obtaining nonperturbative results in gauge theories. Investigation of dense hadronic matter and theoretical support of the MPD/NICA program. Theoretical support of a wide range of current and future experiments at JINR, IHEP, CERN, GSI, JLab and other physics centers.

### Expected main results in the current year:

- Study of non-supersymmetric gauge theories of higher dimensions, derivation of the generalized renormalization group equations, and finding of the high-energy behavior of scattering amplitudes in these theories.
 

Investigation of the renormalization scheme dependence of scattering amplitudes in supersymmetric gauge theories of higher dimensions.

Calculation of the spectral density for a 3-loop photon polarization operator in QED and QCD with account for 4 particle massive cuts.

Investigation of the renormalization group relations for the higher-order perturbative expansion coefficients of the hadronic vacuum polarization function as well as the relevant expressions for the coefficients incorporating the contributions of the  $\pi^2$ -terms in the perturbative expansion of the R-ratio of electron-positron annihilation into hadrons.

Development of methods for solving the quantum spectral curve equations in the N=4 supersymmetric Yang–Mills theories and Aharony-Bergman-Jafferis-Maldacena models. Construction of algorithmic solutions for universal anomalous dimensions of the twist 2 operators in 8 and 6 loop approximations, respectively.

Development of the theory of transverse momentum dependent parton densities with the application to heavy-quark production.

Construction of the longitudinal structure function  $F_L(x, Q^2)$  at small  $x$  obtained from the Froissart-bounded parametrization of  $F_2(x, Q^2)$ .

Large Bjorken  $x$  variable resummation in QCD non-singlet data analysis of deep inelastic scattering on a fixed target.
- Numerical optimization for the perturbative series using the renormalization group (RG) in QCD and truncated Mellin moments approach. Application to the deep-inelastic scattering sum rules and comparison with the experimental data.

Calculation of lepton-pair production in exclusive hadron processes with taking into account the electromagnetic contribution.

Calculation of hadron spin structure effects in the framework of transverse momentum dependent parton densities in a proton to support the NICA-SPD program.

Investigation of electromagnetic and gravitational interactions of twisted particle states and analysis of possibilities of their production in heavy-ion collisions.

Calculation of different form factors, which parametrize the transition of a pion-nucleon mode into the virtual photon and nucleon within the QCD light-cone sum rules, including the twist-3, twist-4 contributions and the coupling constant corrections.

Determination of the properties of the long-range hadron potential, which define peculiar properties of the differential cross sections of proton-proton elastic scattering obtained at the LHC. Investigation and determination of the energy dependence of new effects detected in the experimental data by the TOTEM Collaboration at an energy of 13 TeV.

Calculation of the helicity amplitudes of proton-proton scattering in the framework of the High Energy General Structure model with taking into account the nucleon structure for description of the polarization effects at NICA energies.

Investigation of the influence of quantum anomalies on transport phenomena in a vortical relativistic fluid containing elementary particles with spin one and polarization caused by these phenomena; calculation of anomalous currents of particles with spin one.

Comparative analysis of the results for pion transition and electromagnetic form factors in the low and (or) moderate energy regime experiments.

Evaluation of radiative corrections to distribution amplitudes of (pseudo)scalar and (longitudinal and transverse) vector mesons at N<sup>2</sup>LO in the large- $\beta_0$  approximation for the perturbative part of the QCD sum rules.

Development of the efficient Monte Carlo integration and event generation method based on machine learning algorithms using the existing Tensorflow and Keras machine learning libraries.

Test of leptonic universality for the convexity parameter in semileptonic meson and baryon decays independent of lepton mass and form factor effects.

Calculations of nonleptonic two-particle decays of charmed baryons including the quark diagrams topologically different from tree diagrams.

Improvement of the values of the fundamental constants of atomic physics (Rydberg constant, the ratio of the proton to electron masses) and imposing of more stringent restrictions on the interaction potentials of the "fifth" force using the effective field theory "Nonrelativistic quantum electrodynamics" and high precision spectroscopy of HD<sup>+</sup>, antiproton helium and molecular ion H<sub>2</sub><sup>+</sup>.

- Development of empirical an approach for calculating the cross sections of charged-current quasielastic (CCQE) and CCQE-like interactions of neutrinos and antineutrinos with nuclei. An extensive comparison of calculations with the earlier and modern accelerator CCQE and CCQE-like data for different nuclear targets in a wide energy range.

Implementation of the SuSAM\* model into the GENIE neutrino event generator.

Investigation of the reactor antineutrino anomaly (RAA) within the framework of a quantum field theoretical approach to neutrino oscillations. Analysis of the early reactor data and most recent results from the new experiments such as PROSPECT, Stereo, NEUTRINO-4, and DANSS.

Description of differential distributions of semi-leptonic modes of tau-lepton decays studied at modern and future colliders with taking into account meson-meson interactions.

Construction of high-precision theoretical predictions for the main processes of electron-positron annihilation taking into account the initial beam polarization under the conditions of future colliders including the Super Charm-Tau Factory, ILC and FCC-ee.

- Description of the structure of quark and hybrid matter in neutron stars using the extended sigma model.

Study of the properties of the low-temperature high-density equation of state from multi-messenger Astronomy of compact stars and their mergers: indications the existence of a third family of compact stars (mass twins) and implications for the existence of a critical endpoint in the QCD phase diagram; Bayesian analyses of new observables from GW170817, GW190814 and NICER for different mixed phase constructions of the hybrid quark-hadron EoS; question of the onset of deconfinement in the mass-radius diagram and in the EoS, hybrid EoS regarding their supernova explodability property.

Development of self-consistent approximations to dilute heated hadronic matter in application to heavy ion collisions and supernova matter. Investigation of the influence of in-medium pion effects, magnetic field and rotation on the equation of state of heated hadron matter.

Calculation of the mass gap in the fermion spectrum and study of its dependence on the chemical potential in QCD-like theories by means of lattice simulations.

Study of the QCD equation of state in the external magnetic field and at nonzero baryon density within lattice simulation.

Study of a chiral magnetic wave in quark-gluon plasma in an external magnetic field using lattice simulation with dynamical quarks and physical mass of the  $\pi$ -meson.

Investigation of the finite size effects in the effective potential of gluodynamics for self-dual and chromomagnetic background gluon fields within lattice simulations under various boundary conditions.

Study of spectral functions of quark bound states within the effective quark-meson model by means of the functional renormalisation group. Application of these spectral functions for calculation of transport coefficients in the effective model for both massive bare quarks and the chiral limit of massless quarks.

Development of a unified quark-hadron equation of state satisfying the constraints of Lattice QCD to study the hadron resonance gas with the Mott dissociation and quark confinement mechanism, application to a system with high baryon and isospin densities and prediction of critical endpoint location(s) in application to relativistic heavy ion experiments as well as compact star astrophysics.

Inclusion of event-by-event effects in the HydHSD hybrid model of heavy ion collisions, which combines viscous hydrodynamics of second order with the HSD/PHSD kinetic model, for a detailed study of an elliptic flow.

Update of the event generator based on the model of three-fluid dynamics (3FD). This updated version will be more suitable for simulations of heavy-ion collisions at BM@N and MPD-NICA energies. Study of production of nuclear fragments in heavy-ion collisions, formation and time evolution of collective flow in heavy-ion collisions within the updated THESEUS generator.

Study of the origin and applications of the Tsallis non-extensive statistics describing systems with long-range correlation in a more detailed manner by relaxing the factorization approximation. Investigation of the propagation of nonlinear waves inside quark-gluon plasma medium following the Tsallis-like momentum distribution for realistic phenomenological problems of relativistic heavy ion physics.

## List of Activities:

<b>Activity or experiment</b>	<b>Leaders</b>
<b>Laboratory or other</b>	<b>Main researchers</b>
<b>Division of JINR</b>	
<b>1. Quantum field theory and physics beyond the Standard Model</b>	<b>D.I. Kazakov</b> <b>A.V. Gladyshev</b> <b>A.V. Bednyakov</b>

BLTP	A.N. Baushev, A.T. Borlakov, Ch.R. Das, V. Gnatic, A.V. Kotikov, G.A. Kozlov, L. Mizhishin, V.A. Naumov, A.V. Nesterenko, A.I. Onishenko, A.F. Pikelner, R. Remetsky, D.M. Tolkachev, S.I. Vinitsky, A.A. Vladimirov, R.M. Yakhibbaev, 5 students
LIT	V.P. Gerdt, O.V. Tarasov
DLNP	V.A. Bednyakov, Yu.A. Budagov, E.V. Hramov, L.V. Kalinovskaya, L.G. Tkachev, E.V. Yakushev
<b>2. QCD parton distributions for modern and future colliders</b>	<b>I.V. Anikin</b>
BLTP	<b>O.V. Teryaev</b> V.V. Byt'ev, M. Deka, A.V. Efremov, S.V. Goloskokov, D.B. Kotlorz, Y.A. Klopot, S.V. Mikhailov, A.A. Pivovarov, G.Yu. Prokhorov, A.G. Oganesyan, O.V. Selyugin, A.J. Silenko, N.I. Volchanskiy, 6 students
VBLHEP	Yu.I. Ivanshin, A.P. Nagaitsev, I.A. Savin, R. Tsenov
DLNP	A.V. Guskov
<b>3. Strong interactions phenomenology and precision physics</b>	<b>M.A. Ivanov</b>
BLTP	<b>V.I. Korobov</b> <b>A.E. Dorokhov</b> A.B. Arbuzov, D. Alvarez, A.K. Bekbaev, Yu.M. Bystritsky, S.M. Eliseev, C. Ganbold, S.B. Gerasimov, A.N. Isadykov, L. Martynovich, K. Nurlan, H.-P. Pavel, A.A. Osipov, A.V. Sidorov, Yu.S. Surovtsev, Zh. Tyulemisov, M.K. Volkov, S.A. Zhaugasheva, 5 students
<b>4. Theory of Hadronic Matter under extreme conditions</b>	<b>D. Blaschke</b>
BLTP	<b>V.V. Braguta</b> <b>E.E. Kolomeitsev</b> <b>S.N. Nedelko</b> D.E. Alvarez-Castillo, N.Yu. Astrakhantsev, T. Bhattacharyya, M. Deka, S. Dorkin, A.E. Dorokhov, A.V. Friesen, A.A. Golubtsova, M. Hnatic, M. Hasegawa, Yu.B. Ivanov, E.-M. Ilgenfritz, L. Kaptari, A.S. Khvorostukhin, A.Yu. Kotov, K. Maslov, V.S. Melezhik, A.V. Nikolsky, S. Pandiat, A. Parvan, A.M. Snigirev, V.D. Tainov, O.V. Teryaev, V.D. Toneev, V.E. Voronin, D. Voskresensky, G.M. Zinoviev, 4 students
LIT	A.S. Ayriyan, H. Grigorian, Yu.L. Kalinovskiy, E.G. Nikonov
VBLHEP	O.V. Rogachevsky, V. Voronyuk
<b>5. Theory of electroweak interactions and neutrino physics</b>	<b>A.B. Arbuzov</b>
BLTP	<b>V.A. Naumov</b> <b>F. Simkovic</b> A. Babic, A.V. Bednyakov, Yu.M. Bystritskiy, V.V. Byt'ev, A.E. Dorokhov, M.I. Krivoruchenko, K.S. Kuzmin, A.F. Pikel'ner, D.S. Shkirmanov, G. Seylkhanova, I.A. Sokal'skiy, 1 student
VBLHEP	I.D. Kakorin, V.A. Zykunov

A.A. Dzhioev

### Participating Countries and International organizations:

Armenia, Austria, Belarus, Belgium, Brazil, Bulgaria, Canada, China, Czech Republic, Egypt, France, Germany, Greece, Hungary, India, Iran, Italy, Japan, Kazakhstan, Lithuania, Moldova, Norway, Poland, Republic of Korea, Romania, Russia, Serbia, Slovakia, South Africa, Spain, Sweden, Switzerland, Taiwan, Ukraine, United Kingdom, USA, Uzbekistan.

### Issues addressed and main goals of research:

Suggestion of new theoretical approaches for description and prediction of properties of superheavy, unstable nuclei and exotic nuclear systems, calculation of their characteristics; improvement of models for explanation of mechanisms of reactions of nuclei with particles and nuclei at low and intermediate energies; establishment of universal laws in low-dimensional small-particle systems and small-particle systems at ultra-low energies; development of the two-stage hybrid model of nuclear collisions at relativistic energies; study of nonlinear quantum processes in the interaction of photons with ultrashort high-frequency laser pulses.

### Expected main results in the current year:

- Investigation of the coupling between electric and magnetic vortical states in deformed nuclei within the Skyrme random-phase-approximation method.
  - Study of the effects of the phonon-phonon coupling on the properties of low-lying quadrupole states in the N=80 isotopes.
  - Study of the nature of three branches of the nuclear scissors mode and associated neutron and proton currents taking into account spin degrees of freedom within the framework of the Wigner function moments method.
  - Microscopic analysis of the nature of the spin scissors mode in deformed nuclei.
  - Analysis of the  $\gamma\gamma$ -decay width of a low-energy quadrupole state.
  - Study of electromagnetic transitions in superheavy atomic nuclei.
- Calculation and analysis of the production cross sections for superheavy nuclei with  $Z = 112-126$  using various predictions of their properties.
  - Study of the energy dependence of the total kinetic energy of fission fragments in the pre-actinide and actinide regions.
  - Derivation of the analytical formula for the fusion reaction cross section at sub-barrier energies.
  - Study of open quantum systems in external time-dependent fields.
  - Calculation of spontaneous fission half-lives within the cluster approach.
  - Investigation of the shape co-existence phenomenon and phase transitions in atomic nuclei.
  - Investigation of isovector pair correlations in nuclei with  $A \sim 56$ .
  - Analysis of the contribution of various n-particle- n-hole configurations in the formation of spreading widths of giant nuclear resonances.
  - Calculation of partial cross sections of angular and mass distributions for products formed in deep inelastic reactions and quasifission.
- Bound state calculation of a two-atom system in a two-dimensional anharmonic trap.
  - Investigation of cluster correlations of  $1p$ -shell nuclei in direct nuclear reactions.
  - Computation of resonances in Efimov-type systems.

Study of the structure of weakly bound triatomic systems.

Study of the effect of inelastic nuclear scattering on supernova neutrino spectra.

Investigation of the time evolution of the system of two interacting dipoles in external fields in two-dimensional geometry of an optical trap.

Development of the model of interaction between neutral particles and non-spherical nuclei.

Calculations of the  $0_3^+$  state of the  $^{12}\text{C}$  nucleus in the  $\alpha$  cluster model.

Development of a nonperturbative approach for quantitative analysis of the Coulomb and nuclear breakup of halo nuclei in the region of intermediate and low energies.

Optimal bounds on the speed of the subspace time evolution generated by quantum-mechanical Hamiltonians.

Calculation of the population of atomic levels under the action of a laser pulse of finite length in the adiabatic limit.

Low-energy asymptotics of the two-dimensional scattering phase shifts by a central power-like potential.

Modelling of the high harmonic generation by elliptically polarized strong laser fields beyond the dipole approximation.

Calculation of bound states in the continuum generated by super-interference.

Study of the near-surface diffusion in tunneling of diatomic beryllium molecules through the potential barriers in the strong channel coupling method.

- Identification of physical observables that are sensitive to the dynamics of multi-photon processes caused by intense short and ultra-short laser pulses with arbitrary polarization.

Modification of theoretical models for the processes of photo- and hadro- production in order to study the reaction mechanism and structure of exotic hadrons.

Calculation of the cross sections for reactions of the Y-meson with light mesons in the framework of the chiral model using different form-factors.

Investigation of the phase diagram structure for the quark matter under rotation in the framework of the Nambu-Jona-Losinio model.

Development of the existing and new approaches to solve the Dyson-Schwinger equations for quark and gluon propagators and the Bethe-Salpeter equations for quarkonia and glueballs at zero and finite temperature, and investigation of the analytical properties of the obtained solutions in the complex Euclidean plane.

Detailed study of the temperature dependence of gluon and quark propagators in the neighbourhood of temperatures of possible phase (crossover) transitions within the framework of Matsubara imaginary time formalism.

Theoretical analysis of the peculiarities of the pion-nucleon  $3-3$  resonance in pion-meson scattering on bound nucleons in nuclei.

Investigation of the transverse momentum distributions of hadrons created in heavy-ion and proton-proton collisions in the framework of statistical models.

Calculation of relativistic corrections to the form factors of three-nucleon bound states caused by Lorentz transformations using multi-rank separable potentials.

Investigation of the impact of the quark anomalous magnetic moment on the pion electromagnetic form factor.

## Theory of Complex Systems and Advanced Materials

**Leaders:** V.A. Osipov  
A.M. Povolotskii

### Participating Countries and International organizations:

Armenia, Australia, Austria, Azerbaijan, Belarus, Belgium, Brazil, Bulgaria, Canada, Czech Republic, Denmark, Ecuador, Egypt, France, Germany, Hungary, India, Iran, Italy, Japan, Mongolia, New Zealand, Poland, Republic of Korea, Romania, Russia, Serbia, Slovakia, Slovenia, South Africa, Spain, Switzerland, Taiwan, Ukraine, United Kingdom, USA, Uzbekistan, Vietnam.

### Issues addressed and main goals of research:

Development of analytical and numerical methods for studying complex many-body systems that are of current interest in modern condensed matter physics, the development of mathematical models of these systems and the identification of universal laws on the example of studied models. Analysis of both lattice and field-theory models of equilibrium and non-equilibrium statistical systems and modeling of a wide class of new materials, including nanostructured materials, which are of great practical importance. The concepts of scaling and universality allow one to go beyond the model approach and to apply the results obtained to broad classes of phenomena studied in the physics of condensed matter. The results obtained will be used in carrying out experimental studies of condensed matter at JINR. It is important to note the markedly growing interdisciplinary nature of research, where condensed matter physics and statistical physics closely intersect with atomic and nuclear physics, particle physics, mathematical physics, astrophysics, and biology.

### Expected main results in the current year:

- Development of new methods for studying structural properties of complex systems at nano and micro scales using the small-angle scattering technique. Description of magnetodielectric and magnetorheological effects in smart composite materials.

Modeling of vacancy defects with impurities generated by irradiation with neutrons or heavy ions in  $\text{HfC}_x\text{N}_{1-x}$  and graphene layers on wolfram slabs for the purpose of comparison with the quantities measured by positron annihilation spectroscopy.

Construction of the theoretical magnetic phase diagram and the spin-wave spectrum of rare-earth magnets  $\text{YbMgGaO}_4$  and  $\text{YbZnGaO}_4$  in a magnetic field and comparison with inelastic neutron scattering data.

Calculation of quantum corrections to the spin-wave spectrum of strongly spin-orbit coupled insulator in a magnetic field with in-plane anisotropic interactions.

Calculation of magnon spectral line broadening in a honeycomb ferromagnet with Dzyaloshinskii-Moriya interactions.

Calculation of the electronic spectrum in strongly-correlated electronic systems within the t-J model. Study of the influence of short-range antiferromagnetic correlations on the transformation of the Fermi surface topology. Comparison of the obtained results with experiments in hole-doped cuprates.

Calculation of the electronic spectrum and superconductivity temperature as a function of doped holes in the extended t – J model where the intersite Coulomb repulsion and the electron-phonon interaction are taken into account.

Development of new methods for regulating spin reversal in magnetic nanomaterials. Construction of a theory of statistical systems with several coexisting symmetries.

- Investigation of dynamics of collective excitations in the Josephson superconductor-ferromagnet-superconductor nanostructures and their manifestation in the current-voltage characteristics of these systems.

Calculation of the electron mobility and conductivity of polycrystalline graphene.

Investigation of the electron transport in nanostructures based on modern materials such as transition metal chalcogenides and graphene, taking into account the effect of scattering by phonons and the role of the surface.

Investigation of electronic transport properties of molybdenum disulphide monolayer with randomly distributed and periodic antidots in the band and hopping transport regimes.

Investigation of a novel type of superconductivity that emerges in the 3-band Hubbard model on the lattices featuring a topological flat band. Application of this approach to account for high-temperature superconductivity in CuO<sub>2</sub> geometry.

- Finding of connections between the 6j-symbols of the group SL(2,C) with the degenerate cases of superconformal indices of four-dimensional field theories and partition functions of three-dimensional field theories on curved manifolds.

Construction of superconformal indices related to field theories on lens space.

Description of stochastic models of interacting particles with pairing on a one-dimensional lattice. Construction of the Green function and characterization of limiting hydrodynamics and characteristic fluctuations with the help of the Bethe ansatz and free-fermion techniques.

Description of the statistics of loops in the critical percolation model on a cylinder using techniques based on the Temperley-Lieb algebra representations and the Bethe ansatz.

Finding of stochastic dualities in the models of interacting particles based on the properties of the Hecke algebras and their representations.

Investigation of "entangled states" of a complex quantum system when the entire system is in a well-defined state but subsystems are not.

Construction of the quasi-oscillator representation of linear quantum groups: construction of the finite-dimensional representations and investigation of the Hopf structures.

Finding of polynomial solutions of the finite-difference Knizhnik-Zamolodchikov equations related to the diffusion-annihilation stochastic processes. Description of duality functions for these processes.

## **Modern Mathematical Physics: Gravity, Supersymmetry and Strings**

**Leaders:** A.P. Isaev  
S.O. Krivonos  
A.S. Sorin

**Scientific leader:** A.T. Filippov

### **Participating Countries and International organizations:**

Armenia, Australia, Brazil, Bulgaria, Canada, CERN, Czech Republic, Estonia, France, Germany, Greece, ICTP, India, Israel, Iran, Ireland, Italy, Japan, Lithuania, Luxembourg, Norway, Poland, Portugal, Republic of Korea, Russia, Spain, Taiwan, Ukraine, United Kingdom, USA.

### **Issues addressed and main goals of research:**

The main purpose of research in modern mathematical physics is the development of mathematical methods for solving the most important problems of modern theoretical physics: clarifying the nature of fundamental interactions and their symmetries, construction and study of effective field models arising in the theory of strings and other extended objects, uncovering of the geometric description of quantum symmetries and their spontaneous breaking in the framework of search for a unified theory of all fundamental interactions, including quantum gravity. Mathematical physics in recent years has been characterized by increasing interest in identifying and effective use of integrability in various areas, and in applying powerful mathematical methods of quantum groups, supersymmetry and non-commutative geometry to quantum theories of fundamental interactions as well as to classical models.

The main goals and tasks of the research within the theme include: development of new mathematical methods for investigation and description of a variety of classical and quantum integrable models and their exact solutions; analysis of a wide range of problems in supersymmetric theories including models of superstrings and superbranes, study of non-perturbative regimes in supersymmetric gauge theories; development of cosmological models of the early Universe, primordial gravitational waves and black holes. The decisive factor in solving the above problems will be the crucial use of the mathematical methods of the theory of integrable systems, quantum groups and noncommutative geometry as well as superspace techniques.

### **Expected main results in the current year:**

- Construction of the hierarchy of Mironov lagrangian cycles in Grassmannians of any degree of homogeneity.

Search for minimality and the Hamiltonian minimality conditions for the Mironov lagrangian cycles in the Kahler – Einstein manifolds.

Obtaining of giant magnons and single spike quasiclassical string solutions on the  $Schr5 \times T_{1,1}$  background. Search for dispersion relations for these classes of string solutions in the above background by using finite combinations of conserved charges.

Investigation of pulsating strings on the  $Schr5 \times T_{1,1}$  background. Obtaining of energy spectra and perturbative quantum corrections up to first order in the small parameter by semi-classical quantization of the pulsating string.

Obtaining of quasiclassical string solutions of different types in 5d Kerr-AdS background geometry, mostly of the pulsating string class.

Calculation of quadratic fluctuations of the world sheet of different types of string configurations and obtaining of a one-loop correction to energy of pulsating string solutions.

High precision calculations of quasi-normal modes and study of their physical applications.

Development of new methods for solution of quasilinear partial differential equations in the complex domain of variables and their physical applications.

Construction of an  $N=(1,0)$  superfield analog of the Pasti-Sorokin-Tonin action of the abelian self-dual tensor field in six dimensional spacetime, search for its generalizations with the nonabelian tensor field and  $N=(2,0)$  supersymmetry.

Research and effective construction of state spaces in orthogonal and symplectic quantum integrable systems associated with the Yangians of the classical series  $B(n)$ ,  $C(n)$  and  $D(n)$  Lie algebras. Investigation of the scalar products of state vectors in these models.

Development of a new model of black hole evaporation in terms of a matrix model for dual two-dimensional gravity. Investigation of a case involving conical singularities in gravitational theory.

Wilson loops calculation for the supersymmetric case of the 5d Kerr-AdS background; the analysis of the leading contributions and comparison with the results of calculations in the dual conformal theory on  $R \times S^3$ .

Study of the dynamics of a quasi-classical pulsating (bosonic) string in the 5d Kerr-AdS space. Search for anomalous dimensions of operators for the dual gauge theory. Calculation of the quadratic fluctuations of the world sheet for various types of string configurations, obtaining of a one-loop correction to energy of pulsating strings.

Derivation of covariant equations of particles with continuous (infinite) spin within the framework of the generalized Wigner scheme. Search for infinite-dimensional analogs of the Wigner operators that transform a massless test pulse into an arbitrary one.

Construction of projectors onto irreducible representations of symmetry groups of multidimensional (anti) de Sitter spaces using the multidimensional Poincaré group algebraic method well-proven in the theory of representations, the key object of which is the Brauer algebra.

Construction of the split Casimir operator (SCO) for the exceptional Lie algebras in the defining and adjoint representations as well as calculation of the characteristic identity for SCO and finding of the corresponding solutions to the Yang-Baxter equation.

Construction of the trigonometric and hyperbolic Calogero and Ruijsenaars-Schneider models with extended supersymmetry.

- Study of quantum models of  $N=4$  and  $N=8$  supersymmetric mechanics, their integrability, the presence of hidden (super) symmetries and exploring of their relationships with supersymmetric gauge theories.

Construction of new examples of quaternion-kähler  $N=4$  mechanics on inhomogeneous target manifolds, including those with Wess-Zumino terms in the Lagrangian, investigation of their hamiltonian structure and quantization for a few simple cases.

Generalization of the method of gauging isometries in  $N=4$  mechanics to the  $N=8$  case, study of its possible role for constructing new models of  $N=8$  mechanics and finding out interrelations between different models.

Setting up new superextensions of integrable multiparticle systems of the Calogero type and their covariant quantization with application of the 1D harmonic superspace approach and the gauging method and revealing of the relation of these methods to the hamiltonian approach to the same systems.

Analysis of the quantum structure of the superfield effective action in the 6D and 5D supersymmetric gauge theories and supergravities on the basis of the appropriate harmonic superspace formulations.

Study of conformal field theories and their connections with integrable models and N=2 supersymmetric gauge theories as well as applications of these formalisms in condensed matter, statistical, and gravitational physics.

Study of the  $p>1$  и  $q>1$  limits of the difference equations for rarefied elliptic hypergeometric integrals. Obtaining of the corresponding difference equations for the parafermionic hyperbolic hypergeometric integrals in this limit, which will be used to study supersymmetric extensions of the relativistic Calogero models and also for calculation of the one-point matrix of the modular transformations on a torus in the N=1 supersymmetric 2D Liouville field theory.

Study of black holes and regular particle-like localized solutions of the Einstein equations in asymptotically flat 3+1 dimensional spacetime and in the asymptotically AdS spacetime.

- Derivation of vacuum energy for quantum fields on the background of several crossed or moving cosmic strings. Study of various effects related to cosmic strings, their peculiarities and observability in the massless string limit.

Development of the heat kernel approach and derivation of the Schwinger-DeWitt coefficients for the SU(N) gluodynamics with boundaries and in the external field, specifically, for studying the influence of the boundary conditions on the effective potential and the free energy. Derivation of the uniform asymptotic expansion for the hypergeometric function arising in the free energy computation.

Investigation of non-minimal interactions induced by loop corrections in effective scalar-tensor theories of gravity. Determination of the restrictions on the magnitude of these interactions by the observed form of Newton's law as well as by data on violation of the weak equivalence principle.

Investigation of cosmological perturbations in a covariant formulation of teleparallel gravity with non-minimal coupling. Derivation of equations for scalar perturbations within this approach and obtaining of the spectrum of scalar perturbations during inflation. Comparative analyses with the case of teleparallel gravity without non-minimal coupling and with the results obtained by other methods.

## **Dubna International Advanced School of Theoretical Physics (DIAS-TH)**

**Leaders:** V.V. Voronov  
A.S. Sorin

**Scientific leader:** A.T. Filippov

### **Participating Countries and International organizations:**

Armenia, Austria, Belarus, Brazil, Bulgaria, Canada, China, CERN, Czech Republic, France, Germany, Greece, Hungary, India, Israel, Italy, Japan, Norway, Poland, Romania, Russia, Serbia, Slovakia, South Africa, Spain, Turkey, Ukraine, United Kingdom, USA, Vietnam.

The Bogoliubov Laboratory of Theoretical Physics (BLTP) has a good record of organizing international workshops and schools in Dubna. DIAS-TH organizes and supervises all educational programs for students, postgraduates, and young scientists at BLTP. It should function continuously and the standard short schools (about 3-4 a year) should be organized coherently. Other educational programs in Dubna such as the JINR University Center may also correlate with DIAS-TH (common programs on modern theoretical physics, workshops for students and young scientists, etc.).

### **The main goals of DIAS:**

- Training courses for students, graduates, and young scientists in the JINR Member States and other countries (according to special agreements and grants).
- Looking for and supporting gifted young theorists in the JINR Member States; creating databases of students and young researchers.
- Organization of schools of different levels in Dubna and coordination with similar schools in Russia, Germany, and other European countries.
- Support of the JINR experimental programs by organizing lecture courses and review lectures on new trends in modern physics.
- Cooperation with the JINR University Center in training students and postgraduates as well as in organizing schools for students.
- Coordination of the research - training programs with workshops and conferences at JINR.
- Coordination with the schools and workshops supported by the European
- Participation in nets of workshops and schools in Europe.
- Publication of lectures and discussions in different forms, in particular, with the use of modern electronic equipment, etc.
- Supporting the WEB page of DIAS-TH which should become the organizing center of the programs related to DIAS-TH.

The main topics of the DIAS activity should be centered around the most important directions of research at BLTP: Theory of Fundamental Interactions; Nuclear Theory; Theory of Condensed Matter; Modern Mathematical Physics.

## Expected main results in the current year:

- Organization of two international schools at BLTP.
- Organization of one-day lectures/discussions and regular seminars for students and post-graduates.
- Computer processing of video records of lectures, support of digital archive of video records.
- Support of Web-site of DIAS-TH.

## List of Activities:

## Study of Fundamental Interactions in $e^+e^-$ Collisions

**Leader:** A.S. Zhemchugov

**Deputy:** A.V. Guskov

### Participating countries and international organizations:

CERN, China, Germany, Poland, Russia, Sweden.

### Issues addressed and main goals of research:

The Standard Model (SM) provides the most accurate and universal description of the physics phenomena on a microscale nowadays. However, it is not free from a number of shortcomings. Some predictions of the Standard Model still have not been observed experimentally. In many cases the accuracy of the predictions is limited by the experimental knowledge of the key free parameters of the theory. At the same time, the search for New Physics beyond the Standard Model may show the way to further develop the theory and to get rid of its shortcomings. The main tool for these studies is the collider experiments using both proton-proton (LHC) and electron-positron collisions. The latter are most suitable for the precision studies of elementary particles with obvious advantages from well-defined kinematics of the initial state and the absence of the large QCD background typical of hadronic colliders.

Precision test of SM predictions and search for new phenomena beyond the SM in charmonium and tau lepton decays are fulfilled in the scope of this theme using the world best facility in this energy domain - the unique electron-positron collider BEPC-II and the BES-III detector. At the same time, preparation for experiments at the future electron-positron colliders (ILC, CLIC, CEPC, FCC-ee) is under way.

### Expected results in the current year:

- BES-III data analysis.
- Development of offline software and analysis tools.
- Development of a multipurpose MC event generator to describe the main processes of  $e^+e^-$  annihilation including radiative corrections at a level of more than one loop. The generator will take into account the particle polarization for both initial and final states.
- Development of standard program codes to calculate radiation corrections at a level of 2 (for EW interactions) and 3 (for strong interactions) loops.
- Study of the research potential of the experiments at the CLIC collider in the domain of precision measurements and search for new physics on the basis of full detector simulation.

## ATLAS

### Upgrade of the ATLAS Detector and Physics Research at the LHC

**Leader:** V.A. Bednyakov  
**Deputies:** E.V. Khramov  
 A.P. Cheplakov

#### Participating countries and international organizations:

Armenia, Azerbaijan, Belarus, Bulgaria, Canada, CERN, Czech Republic, France, Germany, Georgia, Israel, Italy, Netherlands, Russia, Slovakia, Spain, USA, Uzbekistan.

#### Issues addressed and main goals of research:

Absolutely new and unique data will be obtained in multifaceted and comprehensive researches of proton-proton scattering processes. Analysis of these data will allow several fundamental physical problems to be solved. Within this project, JINR scientists will participate in these analyses.

It is expected to obtain new results and make publications on all above-mentioned tasks where JINR scientists have responsibilities. The most important tasks are the studies of the proton structure and hadron state spectrum, probing of the Standard Model at the LHC energies, search for and investigation of supersymmetry, search for the evidence of existence of new particles and new interactions. In addition JINR intend to obtain new results that will help specify properties of already known elementary particles such as  $W$ - and  $Z$ -bosons, top-quark, heavy baryons etc.

Implementation of this Project aimed at solving highly significant scientific problems unique applied results that may significantly change the quality of life. Among these results can be experience in operation of remote monitoring systems for technically complicated devices, work with big data, development and practical use of distributed computing systems (GRID) in a long-term large-scale experiments.

#### Expected results in the current year:

- Investigation of the applicability of the Standard Model and verification of SM predictions (including interactions of heavy ions), determination the structure of the proton at ultra-high energies (PDFs), tuning and improvement of relevant computer codes and events generators etc.
- Search for the chiral  $Z^*/W^*$  bosons in the two-jet decays and in the process with more complex topology of their associative production including heavy  $b$  and  $t$  quarks.
- Search for (supersymmetric) charged Higgs bosons via their specific decay modes (3-lepton, etc).
- Analyses on associated productions of the SM Higgs with top-antitop pair and search for production with single top.
- Search for a valence-like nonperturbative component of heavy quarks in the proton (intrinsic heavy quarks) via specific final state topology in the pp interactions.
- Search for new hadrons and baryons containing heavy  $c$  and  $b$  quarks and study of their properties.
- Measurement of the Drell Yan triple-differential cross section and effective leptonic weak mixing angle in the  $Z$ -boson decay.
- New comprehensive study of the gluon structure of the proton, etc.
- Search for quantum black holes in the lepton+jet channel at 13 TeV.
- Participation in the development of the event trigger indexing infrastructure.
- Development and maintenance of the TDAQ system.

## Search for New Physics in the Charged Lepton Sector

**Leaders:** V.V. Glagolev  
Z. Tsamalaidze

**Deputies:** Yu.I. Davydov  
N.V. Khomutov

**Scientific leader:** J.A. Budagov

### Participating countries and international organizations:

Belarus, Bulgaria, Czech Republic, France, Georgia, Germany, Italy, Japan, Kazakhstan, Russia, Slovakia, Switzerland, Ukraine, United Kingdom, USA.

### Issues addressed and main goals of research:

The Mu2e experiment at Fermilab, COMET experiment at J-PARC and the MEG II experiment at PSI are a dedicated search for the CLFV processes  $\mu^- N \rightarrow e^- N$ ,  $\mu^+ \rightarrow e^+ \gamma$ . Once neutrinos masses are included, the process is allowed but still effectively absent since the rate is proportional to  $(\Delta m_{ij}^2/M_W^2)^2$ , where  $\Delta m_{ij}^2$  is the mass difference squared between *i*th and *j*th neutrino mass eigenstates, and  $M_W$  is the mass of the W boson.

The predicted rates for the  $\mu^- N \rightarrow e^- N$  and  $\mu^+ \rightarrow e^+ \gamma$  CLFV processes are less than  $10^{-50}$  each. This makes this process a very theoretically clean place to search for NP effects. In many NP models that include a description of neutrino mass, the rates for these processes are enormously enhanced so that they occur at a level to which Mu2e experiment will have sensitivity. Conversion measurement at the level of  $10^{-17}$ , which is the COMET goal, is a factor of 10000 better than the current experimental limit  $B(\mu^- + Au \rightarrow e^- + Au) < 7 \cdot 10^{-13}$  from SINDRUM-II at PSI.

Participation in the creation and tests of the theoretical views in the topics. Study of CP-violation in the lepton sector with the help of neutrinos. Study of hyperfine interactions of an acceptor impurity in semiconductors with the aid of negative muons. Investigation of the behavior of positive muons in systems with magnetic nanoparticles.

### Expected results in the current year:

- Tests of the  $CsI$  and  $BaF_2$  e.m. calorimeter elements with the gamma sources and electron beam.
- Participation in the construction and tests of modules of scintillator counters for the veto system. Quality control.
- Filling the batch of Mu2e scintillation counters with CKIN and testing them for leakage.
- Maintenance of the visualization and control software.
- Development and tests of the Mu2e e.m. calorimeter preamplifiers at JINR.
- Participation in the radiation hardness tests of the detector elements.
- Participation in the creation of an active scintillation target of a new type with a volume of about 2 cubic meters for the T2K experiment.
- R&D of thin-wall straw tubes for COMET. Development, production and tests of the straw detector and electromagnetic calorimeter prototype.
- Calibration of LYSO crystals.
- R&D of muon veto system elements.
- Analysis of the experimental data on the radiative pion decay collected by the PEN experiment.
- Participation in the development of the positron tracker for the MEG-II experiment, DAQ, data analysis.
- Participation in the data taking and analysis of experimental data obtained with CERN hadron beams.

- Software development for data processing and analysis.
- Study of the behavior of magnetic nanoparticles with high magnetic anisotropy by the muon spin rotation technique.
- Data analysis of the  $p+t$  synthesis using the muon catalysis method.

## Study of Neutrino Oscillations

**Leaders:** D.V. Naumov  
A.G. Olshevsky

### Participating countries and international organizations:

China, Czech Republic, France, Germany, Japan, Italy, Romania, Russia, Slovakia, Switzerland, Turkey, USA.

### Issues addressed and main goals of research:

- Measurement of the neutrino mixing angle  $\theta$  and the squared mass difference  $\Delta m^2_{ee}$  in Daya Bay experiment.
- Neutrino mass hierarchy determination and measurement of the CP violation phase of the neutrino mixing matrix in the JUNO and NOvA experiments.
- Measurement of the solar neutrino fluxes, search for the sterile neutrino state and new particles.
- Study of tau-neutrino production in proton-nuclear interactions at CERN SPS.
- Development of the Light Collection System for LiAr of the DUNE ND.

### Expected results in the current year:

- Physics analysis of the Daya Bay experiment data on determination of  $\theta_{13}$  and other oscillation parameters.
- An estimation of the mass hierarchy measurements precision in the JUNO experiment with the TAO near detector.
- Use of NOvA experiment Remote Operation Centre at JINR for shifts.
- Data analysis in the NOvA experiment, new results on hierarchy and CP.
- Mass test of JUNO PMT with scanning stations.
- Monitoring of the JUNO veto system planes with cosmic muons.
- Installation and commissioning of the JUNO detector (PMT, HV, TT-veto).
- Development of the GNA project: GPU support and automatic differentiation.
- Preparation of the full physics run and data analysis of pilot run data, development of algorithms of charm particles decay search in high track density conditions.
- Analysis of solar neutrino parameters and search for rare processes in the Borexino detector, DS-50 data analysis.

## PANDA Experiment at FAIR

**Leader:** G.D. Alexeev  
**Deputy:** A.N. Skachkova

### Participating countries and international organizations:

Belarus, CERN, Germany, Russia.

### Issues addressed and main goals of research:

The study of the exotic nuclear-matter states and nucleon structure in the PANDA experiment at FAIR. Start of the joint work for construction PANDA muon detector.

### Expected results in the current year:

- Signing of the FAIR-JINR contract on the Muon System construction.
- Readiness of mass production workshop for MDT detectors.
- Start of MDT detectors production.
- Finalizing of electronics design.
- Calibration of the prototype at CERN to all types of particles in energy range 0.5-1 GeV.
- Particle identification algorithms (PID) tuned on beam test results.

## Astrophysical Researches with the TAIGA Experiment

**Leader:** A.N. Borodin

**Deputy:** L.G. Tkachev

### Participating countries and international organizations:

Germany, Japan, Italy, Mexico, Republic of Korea, Romania, Russia.

### Issues addressed and main goals of research:

- Search for local galactic sources of gamma rays with energies above 20-30 TeV.
- Study of gamma rays fluxes from known sources in the same energy region.
- Search for diffuse gamma rays from the galactic disk.
- Study of the energy spectrum and the mass composition of cosmic rays in the energy range of  $10^{15}$  to  $10^{17}$  eV in order to detect spots of Lorentz invariance violation.
- Search for galactic PeVatrons.
- The TAIGA observatory also plans to introduce a "hybrid method" of observation - the combined use of IACT and HiScore wide angle Cherenkov detectors. This method will not only significantly improve the quality of high-energy gamma-rays emission signals selection from background hadron events, but will also help to match available for today parts of the cosmic ray spectrum (CR) obtained by fundamentally different methods - ground-based (in the range above  $10^{15}$  eV) and orbital (below  $10^{14}$  eV).
- In the framework of the NUCLEON space experiment the spectra and elemental composition of CR were measured in the energy range  $10^{11}$ - $10^{15}$  eV, i.e. in the "knee" region in the CR spectrum and in front of it. Further progress in applying this technique in the planned OLVE-HERO experiment. The unique size design of the detector (more than  $10\text{ m}^3$ ) within 5 years of direct extra-atmospheric measurements will provide data, large statistics which allow to identify changes to the composition of cosmic rays in the energy interval and to measure the angular anisotropy of the CR.

### Expected results in the current year:

- Design, manufacture and testing for the fourth IACT telescope at the JINR.
- Modernization of event simulation programs in the TIGA experiment. Upgrade of software for data collection and the production of mirrors for the fourth IACT telescope.
- Processing for IACT telescope, as well as for their hybrid mode of operation in conjunction with HiScore detectors.
- MC-simulation of the joint operation of the IACT telescope and the TAIGA observatory's wide-angle Cherenkov detectors and optimization of the selection of events from gamma rays from the background.
- Monitoring of the brightest gamma-ray sources at the TAIGA observatory in hybrid mode (joint observation of HiScore and IACT). Upgrade of software for IACT data analysis.
- Completion of data processing for the TUS and NUCLEON space experiments.
- Study of the crab nebula gamma radiation in the energy range of 2-10 TeV (when the telescope is operating independently) and check the correctness of the telescope operation and data processing procedure. Observation of the brightest extragalactic sources of gamma radiation Mrk-421, Mrk-501.

## Investigations of Compressed Baryonic Matter at the GSI Accelerator Complex

**Leaders:** V.P. Ladygin  
V.V. Ivanov  
**Deputy:** O.Yu. Derenovskaya

### Participating countries and international organizations:

Czech Republic, France, Germany, Poland, Romania, Russia.

### Issues addressed and main goals of research:

Expertize of the design of the superconducting dipole magnet, design and development of straw detector prototype for the CBM experiment at the GSI accelerator complex. Study of the multiparticle dynamics in heavy ion collisions at SIS100 and SIS300. Development of algorithms and software for the trigger, simulation and data analysis. Participation in HADES experimental at SIS18 and SIS100.

### Expected results in the current year:

- Expertize, preparation of the drawings and magnetic calculations for the superconducting dipole magnet for the CBM experiment. Optimization of the RICH detector.
- Design and testing of the straw detector prototype.
- Development of the algorithms and software for the trigger and data analysis.
- Simulation of the multiparticle dynamics in heavy ion collisions.
- Development of the mathematical methods and fast computing algorithms for the data analysis and selection of the signal events.
- Participation in experimental data taking using pion, proton and heavy ion beams with HADES at SIS18. Development of the algorithms for data analysis. Participation in experimental data analysis. Theoretical interpretation of the obtained data.

## Study of Rare Charged Kaon Decays and Search for Dark Sector in Experiments at the CERN SPS

**Leaders:** V.D. Kekelidze  
Yu.K. Potrebenikov

**Deputy:** D.V. Peshekhonov

### Participating countries and international organizations:

Belarus, Belgium, Bulgaria, CERN, Canada, Chile, Czech Republic, Germany, Italy, Mexico, Romania, Russia, Slovakia, Switzerland, United Kingdom, USA.

### Issues addressed and main goals of research:

Realization of the NA62 Project allows to clarify the CP-violation problem, to measure precisely very rare charged kaon decay to charged pions and two neutrinos, to carry out a search for supersymmetric particles and their partners to observe physics beyond the Standard Model. In addition, the characteristics of rare kaon and hyperon decays will be improved. Straw-detectors of the NA62 high resolution magnetic spectrometer working in vacuum will be supported during experimental runs. Development of a new detector prototype based on straws with a smaller diameter will be started to use it at higher intensity of the beams. Software for simulation, data analysis and processing will be developed.

The main objective of the NA64 experiment is to search for physics beyond the SM, namely the search for the dark photon ( $A'$ ) and other manifestations of the dark sector in the experiments on the CERN SPS electron and muon secondary beams. Tracking detectors based on the straw tube technology will be created and supported. Software for data MC simulation and analysis will be developed.

### Expected results in the current year:

#### In frame of NA62:

1. NA62 and NA48/2 data analysis will be carried out.
2. Software for the simulation of the magnetic spectrometer and full set-up will be developed; system for detector calibration and event reconstruction will be upgraded; general software of the experiment will be developed.
3. Calibration and testing of the NA62 straw detectors will be carried out.
4. Participation in the NA62 experimental run at the CERN SPS.

#### In frame of NA64:

1. NA64, analysis of the experimental data obtained during the 2017--2018 runs.
2. Development and putting into operation of new track stations based on 6~mm straw tubes. Operation and support of the detectors.
3. Equipment preparation for the 2021 run in the new experimental zone on the H4 and muon SPS channels, CERN.
4. On-line and off-line software development, for the straw chambers analysis and for the DAQ experiment in particular.
5. Participation in the data taking at the CERN SPS.

## CMS. Compact Muon Solenoid at the LHC

**Leader:** A.V. Zarubin  
**Deputy:** V.Yu. Karjavin  
**Scientific leader:** I.A. Golutvin

### Participating countries and international organizations:

Armenia, Austria, Belarus, Belgium, Brazil, Bulgaria, CERN, China, Croatia, Cyprus, Czech Republic, Estonia, Finland, France, Georgia, Germany, Greece, Hungary, India, Iran, Ireland, Italy, Lithuania, Mexico, Montenegro, Netherlands, New Zealand, Pakistan, Poland, Republic of Korea, Russia, Serbia, Spain, Switzerland, Taiwan, Turkey, Ukraine, United Kingdom, USA, Uzbekistan.

### Issues addressed and main goals of research:

The CMS Collaboration has constructed a general-purpose detector to be operational at the start-up of the Large Hadron Collider (LHC/CERN) to exploit its full discovery potential. Study of fundamental properties of the matter in Super High Energy proton-proton and nucleus-nucleus interactions.

The major activities of JINR are focused on the following directions:

- hadron calorimetry, including endcap hadron, and preshower detector;
- forward muon stations with cathode strip chambers;
- development of Physics program to test SM and BSM.

### Expected results in the current year:

- Upgrade and technical support of the CMS detectors.
- CMS start up shifts, data taking, and data quality monitoring.
- Processing and analysis of experimental data, development and improvement of muon and jet reconstruction algorithms.
- Development of software for GRID-based distributed system for data processing and analysis. Data transmission from CERN to JINR.

## Studies of the Nucleon and Hadron Structure at CERN

**Leader:** A.P. Nagaytsev

**Deputy:** A.V. Guskov

### Participating countries and international organizations:

CERN, Czech Republic, France, Germany, India, Israel, Italy, Japan, Poland, Portugal, Russia, Taiwan, USA.

### Issues addressed and main goals of research:

Studies of the generalized parton distributions in various exclusive processes. Study of the mechanisms of exclusive production of photons, pions and vector mesons in the processes of deep inelastic scattering of muons on nuclei (DIS) and in processes of deep inelastic virtual Compton scattering (DVCS). Measurements of the polarizability of a pion. Study of the structure of nucleons in Drell-Yan processes. Study of inclusive and semi-inclusive processes in DIS reactions of muons and hadrons on polarized targets.

- Measurements of the structure functions of a nucleon, polarized parton distributions of nucleons.
- Measurements of the structure of nucleons in muon pair production (Drell-Yan, J/Psi).
- Spin effects in hadron interactions at 0.3-3.0-GeV.
- Study of the mechanisms of exclusive production of photons, pions and  $\rho\rho$ -mesons in DIS and DVCS processes.
- Measurement of the Primakoff reactions cross-sections.
- Creation and development of a set of programs for modeling and data processing. System support for CERN software.
- Preparation of detectors for the COMPASS-II spectrometer.

### Expected results in the current year:

- Measurement of  $\pi^0$  production in the processes of exclusive deep inelastic scattering of muons on a hydrogen target.
- Measurements of Collins and Sivers asymmetry on hydrogen and deuterium targets.
- Measurement of semi-inclusive scattering on hydrogen and deuterium targets with 2 hadrons production.
- Measurement of transverse spin asymmetries in semi-exclusive scattering processes.
- Software development and modeling of various reactions studied on the COMPASS-II spectrometer. Analysis of data in JINR and preparation of publications.
- Theoretical studies on the program COMPASS-I and COMPASS-II.

## Strangeness in Hadronic Matter and Study of Inelastic Reactions Near Kinematical Borders

**Leaders:** E.A. Stokovsky  
E.S. Kokoulina  
D.O. Krivenkov

### Participating countries and international organizations:

Belarus, Czech Republic, Japan, Russia, Slovakia, Ukraine.

### Issues addressed and main goals of research:

Strangeness in hadronic matter and study of boundary effects: study of stabilizing effects of strangeness in nuclear matter and properties of the lightest hypernuclei; study of multi-particle dynamics in the inelastic proton-proton and proton-nucleus interactions with extremally high multiplicity; study of spectra and yields of soft photons in the deuteron-nucleus and nucleus-nucleus interactions.

### Expected results:

- Experimental conclusion about the existence of the hypernucleus  ${}^6_{\Lambda}\text{H}$ .
- New experimental data on the properties of the lightest hypernuclei and experimental verification of corresponding theoretical models for these hypernuclei.
- New experimental data on the drip-line location for loosely bound light hypernuclei with high neutron excess, necessary for the development of the theory of neutron-rich hypernuclei and models of their production in non-central nucleus-nucleus interactions.
- New experimental data on the production of strangeness and vector mesons (including those, containing strange quarks) by polarized photons (close to the relevant thresholds).
- Comparison of the measured energy spectra of gamma-quanta (in the energy range up to several MeV), produced in the interactions of different nuclear beams (from deuterium to heavy nuclei) of Nuclotron with various nuclear targets, with theoretical predictions depending on the multiplicity of charged and neutral particles, as well as on the photon emission angle; verification of various physical hypotheses about the mechanisms of production of "direct" photons in the nuclear interactions.
- Confirmation (or establishing of the upper boundaries) of cross sections for the production of new resonances, decaying into two  $\gamma$ -quanta.

### Expected results in the current year:

- Data taking for  ${}^6_{\Lambda}\text{H}$  search using beam of  ${}^7\text{Li}$  nuclei. Analysis of the first experimental data for the  ${}^6_{\Lambda}\text{H}$  search and for the measurements of hyperhydrogen isotopes  ${}^6_{\Lambda}\text{H}$  and  ${}^4_{\Lambda}\text{H}$  lifetimes.
- Upgrade of the HyperNIS magnetic spectrometer (tracking system) by adding the planes of GEM detectors. These detectors, which have already been (partially) purchased and are being tested at the HyperNIS setup by SFSKYA staff, will be integrated into this setup to improve accuracy of the hypernucleus decay vertex determination.
- Within the collaboration with Japan: data taking at LEPS/LEPS2 setups on the production of strangeness and vector mesons (including those, containing strange quarks) by polarized photons (close to the relevant thresholds); analysis of data on such reactions, taken before.
- Assembling the "shashlyk"-type electromagnetic calorimeter based on 16 planes of gallium-gadolinium garnet crystals and the absorber from a mixture of tungsten and copper between them. Equipping the calorimeter by electronics. Participation in the simulation of the calorimeter use in the SPD setup for the task of direct photon registration, within the

development of the SPD physical program with polarized beams of light nuclei and protons. Participation in works on simulation of the polarimeters (to be created) for experiments with polarized beams at the VBLHEP accelerator complex.

**NICA Complex: Design and Construction of the Complex  
of Accelerators, Collider and Physics Experimental Facilities  
at Extracted and Colliding Ion Beams Aimed at Studying Dense  
Baryonic Matter and the Spin Structure of Nucleons and Light Ions,  
and at Carrying out Applied and Innovation Projects**

**Leaders:** V.D. Kekelidze  
A.S. Sorin  
G.V. Trubnikov

**Deputies:** A.V. Butenko  
V.M. Golovatyuk  
M.N. Kapishin

**Participating countries and international organizations:**

Armenia, Azerbaijan, Belarus, Bulgaria, CERN, Chile, China, Cuba, Czech Republic, Egypt, France, Georgia, Germany, Italy, Israel, Japan, Mexico, Moldova, Mongolia, Poland, Romania, Russia, Slovakia, South Africa, Sweden, Ukraine, USA.

**Issues addressed and main goals of research:**

Search and investigation of phase transitions in strongly interacting nuclear matter at extremely high baryon densities, study of the nucleon spin structure, of light nuclei and polarization phenomena in few nucleon systems. Development of theoretical models of the studied processes and theoretical support of the experiments. Development of the Nuclotron accelerator complex as a basic facility for studying relativistic nuclear collisions in the range of atomic masses  $A = 1 \div 197$ . Investigation of reaction dynamics and studying modifications of hadron properties in nuclear matter, near-threshold strange hyperons production and search for hyper nuclei in interactions of the Nuclotron extracted ion beams with fixed targets at the BM@N detector. Investigation of the nuclear structure at short internucleon distances at the BM@N detector. Development and stage-by-stage creation of the NICA heavy ion collider accelerator complex, the multi-purpose detector (MPD/NICA) and spin physics detector (SPD/NICA) for experiments with colliding heavy ions beams. Modernization of extraction beam lines. Carrying out of experiments with ion beams and polarized proton and deuteron beams at the Nuclotron.

**Expected results in the current year:**

- Development and expansion of the physical programme of the project - "White Paper" of the NICA project. Obtaining new theoretical results for processes of strong interactions in the non-perturbative QCD region, development and tests of models for nuclear matter properties descriptions at extremely high temperatures and densities, investigation of possible nuclear matter states and nuclear collision dynamics at extreme baryonic densities as well as observation of these phenomena in p-odd effects and spin asymmetries.
- Completion of the planned tasks within the Nuclotron-NICA project: assembly and testing of the main subsystems. Development of beam diagnostics systems. Increasing the intensity of the beam from the SPI polarized particle source. Preparation of the Nuclotron for solving first-priority tasks of the NICA program within available running time. Technical design on the SC resonator prototype for the proton linacs. Design of new proton and light ion linear accelerator LILAC.
- Commissioning of the HILAC linear accelerator ( $z/A \geq 0.14$ ), achieving its design parameters. Development and upgrade of the engineering infrastructure. The Booster tests and physics beam runs.
- Tests of the elements of the beam extraction and transportation system from the Booster to Nuclotron. Manufacturing the elements of beam transfer system from Nuclotron to Collider.
- Completion of the tunnel building works for installation the NICA collider elements and systems.
- The data analysis from the argon ion beam and SRC runs. Preparing the BM@N set-up for the next heavy ion and SRC runs at the extracted Nuclotron beams. New data collection at the BM@N.

- Construction and tests of the MPD setup systems in accordance with the work schedule. Serial production of the start option detectors.
- Preparation and presentation of the SPD project. Development of the physics motivation, modeling, optimization of the set-up configuration, including continuation of theoretical studies of Matveev-Muradyan-Tavkxelidze-Drell-Yang, J/psi production processes in polarized proton and deuteron collisions.
- Completion of the 1st-stage NICA computer cluster and its infrastructure.
- Completion of manufacturing and tests the NICA collider magnetic system elements.
- Put the new cryogenic-compressor station and cryogenic facilities in building 1b.
- Reconstruction of the Measuring hall for the applied channels system.

## **Advanced Studies on Systems of New-Generation Accelerators and Colliders for Fundamental and Applied Research**

**Leader:** G.D. Shirkov

**Deputy:** J.A. Budagov

### **Participating countries and international organizations:**

Armenia, Belarus, CERN, Germany, Georgia, Italy, Russia, Slovakia.

### **Issues addressed and main goals of research:**

Creating a network of six Precision Laser Inclinometers (PLI); creating a prototype of an amplitude interferometric length meter for a length of 16 m; creating a prototype of a laser reference line for a length of 128 m; creating a prototype of a seismic-stabilized research platform based on PLI. Investigation of the various carbon-based transmission photocathodes (mainly carbon-based), installation of the second beamline with the 213 nm laser at the photogun bench, development of the photoinjector bench: 150 KeV electron energy achievement, development of the radiation safety, interlock and control systems. Development, design parameters achievement and commissioning of the LINAC-200 linear electron accelerator with the aim of its experimental and education applications. Optimization of the accelerator parameters for users. Maintenance of the FLASH infrared undulator and participation in its experimental program, as well as in the new undulator development; development of photon diagnostic for FLASH, FLASH2 and XFEL and experiments participation. Experimental investigations at formation of 3D ellipsoidal shape electron bunches with small emittances in PITZ with new laser system. Preparation of the proposals and start of the JINR participation in international collaborations for future high-energy colliders.

### **Expected results in the current year:**

- Fabrication of the nanostructured carbon photocathodes and investigation of their electrophysical properties ( $\lambda = 213 / 266$  nm). Assembling of the pepper-pot emittance measurement system main components for the Photoinjector bench. Vacuum system assembling and pumping. Design, fabrication and assembling of the cryopump for the bench vacuum system. Assembling, tuning and calibration of the nanosecond range high-sensitivity electron bunch charge sensor prototype. Bench startup with 120 keV energy.
- Optimization of the Linac-200 beam parameters at 200 MeV energy. Extraction of the beam with wide range parameters from single electrons to 30 mA with repetition rate up to 25 Hz into the atmosphere, optimization of beam parameters for users. Manufacturing of beam parallel transfer system (LNP program) after 2nd and 3rd accelerating stations. Modernization of the cooling, control and interlock systems
- Development and creation of an absolute length meter with micron resolution for lengths of 1-10 m. Determining the sensitivity of the meter on a length of 0.42 m. R&D on the creation of a 128-meter laser reference line with the ability to measure the spatial position of the Measured Point on a controlled object (non-destructive testing). Measurement of microseismic activity at CERN and assessment of the effect of microseisms on the luminosity of the LHC collider, development of technical specifications for the design and software of small-sized PLI.
- Investigation of electron beam and FEL physics: generation of infrared radiation from JINR undulator at FLASH and measurements of longitudinal bunch profile on basis of this radiation; diagnostic of electron bunches at FLASH2 by using of microchannel plate detectors; test experiments with XFEL microchannel plate detectors on synchrotron sources PETRA III, experimental investigations of 3D ellipsoidal shape electron bunches in PITZ with new laser system.
- Preparation of the proposals of the JINR participation in international collaborations for future high-energy colliders. Analysis of 6 T high efficient dipole magnets aimed at the FCC "low energy" pp-collider option at CERN.

## Study of Polarization Phenomena and Spin Effects at the JINR Nuclotron-M Facility

**Leader:** A.D. Kovalenko

**Deputies:** N.M. Piskunov  
V.P. Ladygin  
M. Finger (Jr.)  
R.A. Shindin

### Participating countries and international organizations:

Bulgaria, CERN, Czech Republic, France, Germany, Japan, Poland, Romania, Russia, Slovakia, Switzerland, Sweden, Ukraine, United Kingdom, USA, Uzbekistan.

### Issues addressed and main goals of research:

Development of the infrastructure for spin physics research at the Nuclotron-M/NICA and other facilities. Preparation of the spin control and polarimetry system projects. Measurement of analyzing power in the reaction of polarized protons and polarized neutrons with polyethylene target at the momentum up to 7.5 GeV/c and up to 6.0 GeV/c for the polarized proton and neutron respectively at the setup ALPOM-2. Study of 2N- and 3N-correlations in deuteron-proton elastic scattering and deuteron break-up reactions at the Nuclotron internal target. Measurement of the cross sections and deuteron analyzing powers of the reactions. Completion of the data analysis obtained at the setup Delta-Sigma. Preparation of the proposals on modernization of the spectrometer and the Saclay-Argonne-JINR polarized proton target (setup PPT). Obtained new data on the studying of charge-exchange processes in the interactions of polarized deuterons and protons at the setup STRELA. Development of theoretical models for the description of the simplest nuclear systems taking into account relativistic effects, meson and quark-gluon components of the internal movement. Theoretical analysis of the experimental data obtained at the Nuclotron-M. The study of the properties of strongly interacting matter utilizing polarization phenomena in hadron-nucleon and lepton-nucleon interactions, and in the decay of polarized radioactive atomic nuclei. Study of highly excited nuclear matter and collective effects in nuclear media; delta and other nucleonic resonance excitations on protons and nuclei. Works on the program of the setup DELTA-2 design INR RAN/JINR.

### Expected results in the current year:

- Works:
  - a) preparation of technical documentation for the project of low energy proton and deuteron polarimeter at the Nuclotron injection channel;
  - b) work on the project of a polarimeter based on a cluster target for the NICA collider.
- Fulfilment of the works in accordance with the approved projects and collaborative protocols within the frames of their real financial support, including realization of the projects ALPOM-2 and DSS. Completion of the proton polarimeter upgrade at the Nuclotron internal target. Completion of the data analysis on the analyzing powers  $A_y$ ,  $A_{yy}$  and  $A_{xx}$  in deuteron-proton elastic scattering at the energies 400-1300 MeV. Publication and reports of the results.
- Conceptual design of the installation scheme of the equipment aimed at beam polarimetry, and the polarization control at the SPD straight section of the collider.
- Participation in the joint scientific programs and experiments, design and test of the new detectors elements at the other facilities SPS, LHC, FCC (CERN), RHIC (BNL), MEIC (TJNAF), FAIR (GSI) etc. in accordance with the Agreements.
- Continuation of the development of new calculation methods of the amplitudes and polarization characteristics of deuteron fragmentation and deuteron elastic scattering on protons and nuclei taking into account FSI and relativistic effects.
- Analysis of possibilities of providing new experiments with polarized proton and deuteron beams at the NICA complex, searching of the EDM, in particular.

## List of projects:

## Research on Relativistic Heavy and Light Ion Physics. Experiments at the Accelerator Complex Nuclotron/NICA at JINR and CERN SPS

**Leader:** A.I. Malakhov  
**Deputy:** S.V. Afanasiev

### Participating countries and international organizations:

Armenia, Bulgaria, CERN, China, Czech Republic, Germany, Japan, India, Mongolia, Poland, Romania, Russia, Slovakia, Switzerland, USA, Uzbekistan.

### Issues addressed and main goals of research:

Study of new phenomena in multiple particle productions associated with the manifestation of the quark and gluon degrees of freedom in the interaction of relativistic nuclei. Study of nucleon and nuclear interactions at the VBLHEP accelerator complex, CERN SPS. Energy scan of interactions of nuclei at 20-158 GeV/nucleon energies and the study of their dependence on the atomic number of nuclei. To search for the critical point on the phase diagram of nuclear matter at the NA61(SPS, CERN). Study of hadron production in hadron-nucleus interactions. Use of the obtained data for the precision calculations of neutrino spectra and fluxes in the accelerator experiments to study the neutrino oscillations. Investigation of nucleon clustering and the contribution of unstable nuclear-molecular States to the dissociation of light stable and radioactive isotopes, as well as the properties of rarefied baryonic matter in the dissociation of heavy nuclei. Experimental and theoretical study of deep subthreshold, cumulative processes, the formation of hadrons and antimatter in the transition energy region. Investigation of processes in the region of large  $P_T$  ( $P_T \geq 1$  GeV/c) in non-cumulative and cumulative kinematic regions at SPIN and FODS setups. Study of the behavior of elementary particles, nucleon resonances and nucleon fluctuations in nuclear matter on the SCAN spectrometer. Preparation of proposals of the experiments at the VBLHEP accelerator complex on the Nuclotron extracted beams and NICA Collider. Study of the short-range nucleon-nucleon correlations and the cluster structure of the nuclei using the beams of ions, polarized protons and deuterons at the internal target of the Nuclotron in the framework of the SCAN-3project.

### Expected major results in the current year:

- Investigation of new phenomena in multiple particle productions associated with the manifestation of the quark and gluon degrees of freedom.
- Preparation and performance of the experiments on the internal and extracted Nuclotron beams.
- SHINE data analysis (SPS, CERN). Study of hadron production in hadron-nucleus interactions. Use of the obtained data for the precision calculation of neutrino spectra and fluxes in the accelerator experiments to study the neutrino oscillations. Modernization of the TOF system. Configuration and testing of the three-arms SCAN magnetic spectrometer. Modernization of electronics for data taken. Analysis of experimental data.
- Analysis of the experimental data on the processes of the multiple emission of intermediate mass fragments on the beams of relativistic light ions using a  $4-\pi$  PHASE-3 setup for the registration of nuclear fragments. Performing data analysis to determine the mechanism of multifragmentation and to obtain new information about the nuclear phase transitions "liquid-fog" and "liquid-gas". Investigation of properties of hot nuclei formed in the collisions of light relativistic ions with heavy targets. Production of the detector system for the registration of the decay of hypernuclei.
- Verification of the consequences of the principles of self-similarity and weakening of correlations in the formation of multiple particles.
- Upgrade of the SCAN setup. Analysis of the experimental data on the behavior of nucleon resonances and nucleon fluctuations in nuclei, on the search and study of properties of the bound state-meson in nuclear matter, study of np and pp correlations. Modernization of the Internal target of the Nuclotron.
- Search and study of the Hoyle state and more complex nuclear-molecular States in the dissociation of light nuclei. Analysis of the isotopic composition of the fragmentation of heavy nuclei. Use of automated microscopes, as well as improvement of the NE technology.

- Updating the Marusya installation for conducting the experimental studies with the extracted Nuclotron beams. Investigation of A-dependences of rare subthreshold and cumulative processes of the formation of pions, kaons and antiprotons depending on the type and energy of the incoming nuclei, the momentum and angle of the detected particles. Carrying out correlation experiments with registration of groups of particles in the final state, one of which is cumulative.
- Collection, processing and digitization of the film information obtained using bubble chambers and in electronic experiments with fixed targets under the conditions of registration of multiple birth of particles in the energy range of 1-300 GeV.
- Use of heavy and light ions for applied research.
- Analysis of the experimental data obtained in the PHENIX experiment.
- Processing of the experimental data from 5-9 Runs at the PHENIX setup. Participation in the formation of the program for e-RHIC.
- Preparation of a project to study spin asymmetries at the LHEP accelerator complex.
- Collection of new experimental data in pA- and AA-interactions in the region of large  $p_T$  ( $p_T \geq 1$  GeV/c) at SPIN and FODS facilities, data processing and publication of results

## Investigation of the Properties of Nuclear Matter and Particle Structure at the Collider of Relativistic Nuclei and Polarized Protons

### Leaders:

R. Lednicky  
Yu.A. Panebratsev

### Participating countries and international organizations:

Azerbaijan, Bulgaria, Czech Republic, France, Germany, Kazakhstan, Poland, Russia, Slovakia, USA.

### Issues addressed and main goals of research:

Investigation of the properties of nuclear matter with extremely high density and temperature, search for the signs of the quark deconfinement and possible phase transitions at the collisions of heavy nuclei at the energies of the Relativistic Heavy Ion Collider (RHIC). Measurement of spin dependent structure functions of nucleons and nuclei using polarized RHIC beams.

### Expected results in the current year:

- The data on beam energy scan at 19.6 GeV and 14.6 GeV.
- Data analysis of the collisions of transversely polarized protons at 510 GeV.
- Study of event structure, collective variables, correlation characteristics, femtosopic correlation functions and high  $P_T$  processes.
- Analysis of experimental data with isobaric nuclei  $^{96}\text{Zr}$  and  $^{96}\text{Ru}$ .
- Participation in JINR-BNL and JINR-CERN joint educational programs. Development of JINR educational portal.

### List of projects:

Project	Leader	Priority (period of realisation)
1. STAR	Yu.A. Panebratsev R. Lednicky	1 (2010-2021)

## ALICE.

### Study of Interactions of Heavy Ion and Proton Beams at the LHC

**Leader:** A.S. Vodopyanov

**Participating countries and international organizations:**

Armenia, Austria, Azerbaijan, Bangladesh, Brazil, Bulgaria, CERN, China, Croatia, Cuba, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, India, Indonesia, Italy, Japan, Malta, Mexico, Netherlands, Norway, Pakistan, Peru, Poland, Republic of Korea, Romania, Russia, Slovakia, South Africa, Sweden, Thailand, Turkey, Ukraine, United Kingdom, USA.

**Issues addressed and main goals of research:**

1. Participation in the preparation of ALICE upgrade (Photon spectrometer PHOS, assembly of the setup).
2. Participation in the upgrade of ALICE Inner Tracking System (ITS) - the development of the detector control system software.
3. Realization of experiments at the LHC, data analysis, preparation of publications.
4. Physics research program at the ALICE detector.
5. Development and upgrade of data analysis computing GRID-ALICE in Russia.
6. Participation in the service work on the ALICE detector.

**Expected results in the current year:**

- Participation in the preparation of the proposal for the upgrade of photon spectrometer PHOS.
- Participation in the physics project preparation.
- Physics simulation of heavy ions and protons interactions at LHC energies.
- Data analysis. Preparation of publications.
- Upgrade, testing and supporting of GRID.

**List of projects:**

Project	Leader	Priority (period of realisation)

## Development and Construction of the Prototype of a Complex for Radiotherapy and Applied Research with Heavy-Ion Beams at the Nuclotron-M

**Leader:** S.I. Tyutyunnikov

### Participating countries and international organizations:

Armenia, Australia, Belarus, Bulgaria, Czech Republic, Moldova, Mongolia, Poland, Romania, Russia, Slovakia, Ukraine.

### Issues addressed and main goals of research:

Investigation of various subcritical setups and using them for energy production and radioactive waste transmutation, research of radiation hardness of materials. The quasi-infinite target (Project E&T&RM).

### Expected main results:

- Receiving data about the multiplicities and special distribution of energy-time neutron spectra. Research on massive targets of natural (depleted) uranium and thorium energy production capabilities and processing of radioactive waste, the study of radiation hardness of superconductors by the beams of neutrons and protons.

### Expected results in the current year:

- Installation of a big uranium target at the Phazotron in DLNP, beam adjustment on the target.
- Thermocouple device installation and calibration at the massive uranium target "BURAN".
- Pilot operation of the neutron spectrometer on recoil protons on the "BURAN" under irradiation with protons at Phazotron.
- Investigation of neutron leakage from the surface of the massive uranium target by activation method.
- Investigation of impact of high-power laser radiation on the radioactive decay of minor actinides.
- Investigation of radiation defects in high-temperature superconductors under the irradiation with protons with energy  $E = 660$  MeV.

### List of projects:

Project	Leader	Priority (period of realisation)

## **Development of the FLNR Accelerator Complex and Experimental Setups (DRIBS-III)**

### **Leaders:**

G.G. Gulbekyan  
S.N. Dmitriev  
M.G. Itkis

### **Scientific leader:**

Yu.Ts. Oganessian

### **Participating countries and international organizations:**

Belgium, CERN, China, Canada, Czech Republic, Egypt, France, Germany, Italy, Kazakhstan, Mongolia, Poland, Republic of Korea, Romania, Russia, Serbia, Slovakia, South Africa, USA.

### **Issues addressed and main goals of research:**

The implementation of the DRIBS-III project that includes the upgrade and development of the FLNR cyclotron complex, expansion of the experimental infrastructure of the Laboratory (construction of new physics set-ups), and development of accelerator systems. The project aims at improving the operation stability of accelerators, increasing the intensity and improving the quality of ion beams of stable and radioactive nuclides in the energy range from 5 to 100 MeV/nucleon, while at the same time reducing power consumption. The project objective is to significantly improve the efficiency of experiments on the synthesis of superheavy elements and light nuclei at nucleon drip lines and study of their properties. Moreover, the programme of experiments with beams of radioactive nuclides is anticipated to be expanded.

### **Expected results in the current year:**

- Experiments on the synthesis of superheavy elements Fl–Lv, study of their properties using a new gas-filled recoil separator (GFS-2) of the Factory of Superheavy Elements (SHE).
- Preparation for experiments on the synthesis of elements 119 and 120 in complete fusion reactions with  $^{50}\text{Ti}$  ions.
- Construction of a pre-separator for radiochemical studies of SHE and a new gas-filled recoil separator (GFS-3).
- Development of the infrastructure of the ACCULINNA-2 fragment separator (RF kicker, tritium system).
- Upgrade of the U-400M cyclotron.
- Project development and construction of the U-400 (U-400R) experimental hall.
- Implementation of the programme for physics experiments at the U-400 cyclotron.
- Development of new methods for diagnostics of beams of stable and radioactive nuclides.
- Further work on the construction of a new gas cell based laser ionization set-up GALS for on-line separation of nuclear reaction products by selective laser ionization.
- Further work on the construction of the gas ion catcher.
- Start of construction of the DC-140 cyclotron complex.

## Synthesis and Properties of Superheavy Elements, Structure of Nuclei at the Limits of Nucleon Stability

**Leader:** M.G. Itkis  
**Scientific leader:** Yu.Ts. Oganessian

### Participating countries and international organizations:

Belgium, Bulgaria, CERN, China, Czech Republic, Egypt, Finland, France, Germany, India, Italy, Japan, Kazakhstan, Mongolia, Poland, Republic of Korea, Romania, Russia, Slovakia, South Africa, Spain, Sweden, Switzerland, United Kingdom, USA, Ukraine, Vietnam.

### Issues addressed and main goals of research:

Synthesis of nuclei at stability limits and the investigation of their properties. Investigation of the mechanisms of heavy-ion-induced reactions. Study of the physical and chemical properties of heavy and superheavy elements

### Expected results in the current year:

- Experiments on the synthesis of superheavy elements, study of their nuclear and chemical properties in the  $^{48}\text{Ca}$ ,  $^{50}\text{Ti}$  +  $^{243}\text{Am}$ ,  $^{242}\text{Pu}$ ,  $^{244}\text{Pu}$  reactions at the SHE Factory.
- Preparation for experiments on the synthesis of elements 119 and 120 in complete fusion reactions with  $^{50}\text{Ti}$  ions.
- Experiments on the study of the decay properties ( $\alpha$ -,  $\beta$ -,  $\gamma$ -spectroscopy) of Sg isotopes and heavy isotopes of Rf formed in reactions with  $^{54}\text{Cr}$  and  $^{22}\text{Ne}$  using the SHELS+GABRIELA separator. Experiments on measuring the multiplicity of prompt neutrons from the spontaneous fission of heavy Rf isotopes in reactions with  $^{22}\text{Ne}$ . Test experiment on the spectroscopy of the decay properties of  $^{288}\text{Mc}$  isotopes and its daughter products in the  $^{48}\text{Ca} + ^{243}\text{Am}$  reaction.
- Formation and decay of double/di-nuclear nuclear system formed in the  $^{86}\text{Kr} + ^{232}\text{Th}$ ,  $^{238}\text{U}$  reactions. Study of the mass-energy and angular distribution of fragments produced in these reactions. Investigation of the mechanism of multinucleon transfer. Study of the multi-body decay of low-excited heavy nuclei. Study of the multicluster decay of heavy and superheavy nuclei. Development of physics set-ups.
- Study of nuclei with  $Z < 20$  close to the nucleon drip lines. Analysis of the experimental data on the investigation of the structure of the exotic nuclei  $^7\text{H}$ ,  $^9\text{He}$ ,  $^{10}\text{Li}$ , and  $^{27}\text{S}$  synthesized earlier using radioactive beams at the ACCULINNA-2 fragment separator.
- Experiments at MAVR for studying fast charged particles in coincidence with recoil nuclei. The studies are aimed at determining the reaction mechanism for experiments on the synthesis of new elements. Study of the yield of multinucleon transfer reaction products. Measurement of total reaction cross sections using low-intensity beams of exotic nuclei.
- Analysis of experiments conducted at the MASHA set-up aimed at studying the operational stability of a new design of the hot catcher during the separation of short-lived mercury and radon isotopes synthesized in complete fusion reactions. Measurements according to a prescribed methodology at MASHA for studying the influence of chemically inert coatings on the separation efficiency of the hot catcher – ERC ion source for inert gases and mercury system.
- Theoretical studies of the mechanisms of heavy-ion-induced reactions.
- Maintenance and update of the web knowledge base on nuclear physics.
- Investigation of sizes and shapes of exotic nuclei employing laser spectroscopy methods.

## List of Activities:

Activity or Experiment Laboratory or other Division of JINR Responsible person	Leaders Main researchers	Status
1. Synthesis of new isotopes of superheavy elements at DGFRS FLNR	V.K. Utyonkov	Data taking
	F.Sh. Abdullin, D. A. Ibadullayev, N.D. Kovrijnykh, D.A. Kuznetsov, A.N. Polyakov, O.V. Petrushkin, R.N. Sagaidak, V.D. Shubin, V.G. Subbotin, I.V. Shirokovsky, M.V. Shumeiko, D.I. Solov'ev, L. Schlattauer, Yu.S. Tsyganov, A.A. Voinov, A.M. Zubareva	
2. $\alpha$ -, $\beta$ - and $\gamma$ -spectroscopy of heavy nuclei at the SHELS separator FLNR	A.V. Yeremin	Data taking
	V.I. Chepigin, M.L. Chelnokov, A.V. Isaev, I.N. Izosimov, D.E. Katrasev, A.A. Kuznetsova, O.N. Malyshev, R.S. Mukhin, Yu.A. Popov, V.M. Popov, A.G. Popeko, E.A. Sokol, A.I. Svirikhin, V.A. Sbitnev, M.S. Tezekbaeva

## Non-Accelerator Neutrino Physics and Astrophysics

**Leaders:** V.B. Brudanin  
A. Kovalik  
E.A. Yakushev

### Participating countries and international organizations:

Azerbaijan, Bulgaria, Czech Republic, Finland, France, Germany, Kazakhstan, Poland, Russia, Slovakia, United Kingdom, Uzbekistan.

### Issues addressed and main goals of research:

Search for and investigation of double-neutrino and neutrinoless modes of double beta-decay, clarification of the neutrino nature, Majorana or Dirac, and absolute neutrino mass scale and hierarchies. Search for the neutrino magnetic moment and dark matter. Investigation of galactic and extragalactic neutrino sources, diffusive neutrino cosmic background, and search for exotic particles (monopoles). Use of the neutrino detector for a distant investigation of processes inside of the reactor core of the Kalinin Nuclear Power Plant. Search for sterile neutrinos. Spectroscopy of nuclei far from stability. Development of new methods for charged and neutral particle detection.

### Expected results in the current year:

- Data taking in the  $2\nu\beta\beta$ -decay measurements of  $^{106}\text{Cd}$ ,  $^{82}\text{Se}$ ,  $^{76}\text{Ge}$  with the SuperNEMO and GERDA spectrometers.
- Processing of experimental data and determination of  $T_{1/2}(2\nu\beta\beta)$  for  $^{48}\text{Ca}$ ,  $^{96}\text{Zr}$ ,  $^{130}\text{Te}$ ,  $^{116}\text{Cd}$ ,  $^{82}\text{Se}$  and  $^{76}\text{Ge}$ .
- Data taking with the HPGe-based low-background spectrometer at the Kalinin Nuclear Power Plant. Search for a signal of coherent neutrino scattering on the Germanium nuclei. Search for the neutrino magnetic moment at the sensitivity level of  $\sim 10^{-12} \mu_B$ .
- Continuation of data taking in the EDELWEISS experiment with new detectors operating with an energy threshold of 0.1 keV suitable for the extra-low mass WIMP region. Analysis of previously accumulated data, determination of parameters for light dark matter for the mass region below  $1 \text{ GeV}/c^2$ .
- Research and development of the semiconductor-based detecting systems for the GERDA and MAJORANA experiments. Continuation of the data taking in both experiments. Preparation of the tone-scale germanium project LEGEND.
- Data taking with seven clusters of the BAIKAL-GVD neutrino telescope. Search for and study of high-energy neutrinos of the astrophysical nature. Building and commissioning of new detector clusters. Development and testing of new data acquisition and data transmission systems aiming in a lower energy threshold (Baikal project).
- Investigation of KLL and KMM Auger electrons in  $^{67}\text{Ga}$  and  $^{152,154,155}\text{Eu}$  decays.
- Development and testing of new low-threshold ( $\sim 200 \text{ eV}$ ) HPGe detectors for searching for the coherent neutrino scattering, as well as plastic scintillator detectors for their active shielding.
- Continuation of data taking by the DANSS spectrometer. Data analysis and publication of results (on sterile neutrinos, reactor monitoring, sensitivity to nuclear fuel components) based on statistics over four years of operation (4 million registered antineutrinos). R&D for the upgrade of the DANSS spectrometer.

## List of projects:

Project	Leader	Priority (period of realisation)
1. SuperNEMO	O.I. Kochetov	1 (2013-2021)
2. GEMMA-II	V.B. Brudanin	1 (2010-2021)
3. EDELWEISS-LT	E.A. Yakushev	1 (2010-2021)
4. G&M (GERDA)	K.N. Gusev	1 (2010-2021)
5. DANSS	Yu.A. Shitov V.B. Brudanin	1 (2011-2021)
6. BAIKAL	I.A. Belolaptikov V.B. Brudanin	1 (2009-2023)
7. Muon Ordinary capture for the Nuclear Matrix elementS in $\beta\beta$ decays (MONUMENT)	D.R. Zinatulina	1 (2021-2023)

## Investigations of Neutron Nuclear Interactions and Properties of the Neutron

**Leader:** E.V. Lychagin

**Deputies:** Yu.N. Kopatch  
P.V. Sedyshev

### Participating countries and international organizations:

Albania, Australia, Austria, Azerbaijan, Belarus, Belgium, Bulgaria, CERN, China, Croatia, Czech Republic, Egypt, Finland, France, Georgia, Germany, Hungary, IAEA, India, Italy, Japan, Kazakhstan, Moldova, Mongolia, North Macedonia, Norway, Poland, Republic of Korea, Romania, Russia, Serbia, Slovakia, Slovenia, South Africa, Switzerland, Thailand, Turkey, Ukraine, USA, Uzbekistan, Vietnam.

### Issues addressed and main goals of research:

Experimental and theoretical investigations of symmetry breaking effects in reactions with neutrons and fundamental properties of the neutron to test the parameters of the Standard Model and search for "new physics". Investigation of the properties of excited nuclei, reactions with emission of charged particles, fission physics. Obtaining of relevant data for astrophysics, nuclear power engineering and nuclear waste transmutation problem using neutron- and gamma-induced reactions. Application of neutron physics methods in other fields of science and technology. Development and construction of detectors of neutrons and other ionizing radiation, as well as applied methods in nuclear physics with neutrons. Development of the Intense REsonance Neutron Source (IREN) and the experimental base at the IREN and IBR-2 facilities.

### Expected results in the current year:

#### Investigations of violations of fundamental symmetries in neutron-nucleus interactions and related data

- Measurement of TRI and ROT effects for gamma-rays and neutrons in the fission of uranium by polarized neutrons.
- Measurement of yields and angular correlations of light charged particles in ternary and quaternary fission of  $^{252}\text{Cf}$  using Timepix detectors.
- Determination of characteristics of excitation levels of nuclei in the  $(n, 2n)$  and  $(n, n'\gamma)$  reactions with neutrons with an energy of 14 MeV.
- Measurements of angular and energy distributions of prompt fission neutrons (PFN) in  $^{235}\text{U}(n,f)$  and  $^{239}\text{Pu}(n,f)$  reactions in the resonance region using a position-sensitive twin ionization chamber and 32 scintillation counters.
- Determination of model concepts of modern values of the level density and radiation widths of nuclei of various shapes and types in the capture of slow neutrons.
- Carrying out an experiment to search for a singlet deuteron.
- Measurement of fast neutron cross sections for  $^6\text{Li}(n,\alpha)^3\text{H}$  and  $^{91}\text{Zr}(n,\alpha)^{88}\text{Sr}$  reactions.

#### Investigation of fundamental properties of the neutron, UCN physics:

- Design and development of the necessary experimental equipment for realization of an experiment to measure the efficiency of extracting very cold neutrons from a source by a specially designed reflector.
- Construction of a physical and mathematical model of propagation of slow neutrons in nanostructured diamond reflectors based on data of single small-angle scattering of cold neutrons.
- Measurements of quasi-mirror reflection of VCN from a sample with crystallites of  $\sim 20$  nm in size.
- Design and construction of a new experimental setup for studying the recently observed phenomenon of nonstationary heating of UCNs on surface acoustic waves.

- Development of the concept of a UCN source based on the idea of accumulating a pulsed neutron flux formed by a time lens.

**Applied and methodological research:**

- Measurement of neutron fluxes and spectra by the counting and current method at beamline 1 of the IBR-2 reactor to simulate the possibility of measuring the neutron lifetime.
- Development of a prototype setup for neutron polarization by transmission through a  $^3\text{He}$  target.
- Carrying out vacuum and cryogenic tests of a cryostat with a superconducting magnet to create an all-wave neutron polarizer.
- Development and testing of an elemental analysis technique using the tagged neutron method and high-resolution gamma-ray detectors.
- Investigation with the use of the EG-5 accelerator of the optical and electronic properties of semiconductor materials under X-ray irradiation.
- Development of a modernization project for the EG-5 accelerator and its infrastructure.
- Neutron activation and resonance neutron analysis of archaeological, biological and environmental samples at the IREN facility and at beamlines 3 and 11b of the IBR-2 reactor.
- Creation of a network database of neutron activation analysis to automate studies of the elemental composition of samples of various nature at INP (Alma-Ata, Kazakhstan) and organization of routine neutron activation analysis at the automated site created in 2017-2019 at INP.
- Completion of modernization of REGATA facility at the IBR-2 reactor.
- Determination of the elemental content of plant, biological, geological samples, as well as new materials, including nanomaterials, by means of the neutron activation analysis method at the IBR-2 reactor using the REGATA facility.
- Determination of radiation hardness of clean materials.
- The use of low-background gamma spectrometry and alpha spectrometry to analyze the content of radionuclides in environmental objects.

**Development of the IREN facility:**

1. Providing the neutron beam time from IREN for physical experiments.

**List of projects:**

Project	Leader	Priority (period of realisation)

**Condensed  
Matter Physics,  
Radiation  
and Radiobiological  
Research  
(04)**

## **Investigations of Functional Materials and Nanosystems Using Neutron Scattering**

### **Leaders:**

D.P. Kozlenko  
V.L. Aksenov  
A.M. Balagurov

### **Participating countries and international organizations:**

Armenia, Azerbaijan, Belarus, Bulgaria, China, Czech Republic, Egypt, France, Germany, Hungary, India, Italy, Japan, Kazakhstan, Latvia, Mongolia, Poland, Romania, Russia, Serbia, Slovakia, Spain, South Africa, Switzerland, Tajikistan, Ukraine, United Kingdom, USA, Uzbekistan, Vietnam.

### **Issues addressed and main goals of research:**

Investigations of structural features and dynamics of novel functional materials and nanosystems focused on determination of microscopic mechanisms of the formation of physical properties and phenomena that are important for the development of modern concepts in the areas of condensed matter physics, materials science, chemistry, geophysics, engineering sciences, biology, pharmacology, and for the development of modern technologies.

### **Expected results in the current year:**

#### **Realization of scientific program:**

- Determination of characteristics of the atomic and magnetic structure of giant magnetostrictive alloys depending on thermodynamic conditions, synthesis conditions, alloying additives and thermomechanical processing.
- Determination of parameters of the atomic and magnetic structure of simple and complex oxides with a spinel-type structure under high pressure.
- Determination of parameters of crystal, magnetic and electronic subsystems of multifunctional oxides based on cobalt, manganese, iron in the region of spin transition and antiferromagnetic-ferromagnetic-paramagnetic and metal-insulator phase transitions in a wide range of temperatures and pressures.
- Study of structural mechanisms of the magnetoelectric effect in multiferroics.
- Study of the effect of microstructure of electrodes with varying composition on charge-discharge processes in compact electric power sources. Clarification of structural mechanisms responsible for the capacity and lifetime of batteries. Selection of optimal discharge/charge modes during cycling.
- Analysis of processes of deposition and intercalation of electrically active ions and their derivatives from liquid and solid electrolytes at electrochemical interfaces in compact electric power sources. A comparative study of characteristics of adsorption layers (density, thickness, homogeneity) at electrochemical interfaces for electrolytes and electrodes.
- Study of phenomena and effects induced by the interaction of ferromagnetic and superconducting order parameters in complex structures with helicoidal magnetic ordering.
- Investigation of structural stability of colloidal systems, including biomedical solutions, in bulk and at interfaces under various conditions. Determination of characteristics of adsorption layers at interfaces in case of loss of stability as a result of external influence of gradient electric and magnetic fields, as well as temperature effects. Study of the effect of aggregate formation in bulk on adsorption.
- Investigation of the structure of a number of advanced nanosystems based on composite carbon- and silicon-containing materials, including those based on fullerenes, nanodiamonds and their bioactive derivatives. Study of complex multicomponent systems. Determination of conditions for synthesis of homogeneous systems. Investigation of effects of phase separation in advanced practical systems.

- Determination of structural characteristics of magnetic elastomers and carbosilane dendrimers, holding promise for technological applications.
- Study of structure and vibrational spectra of molecular complexes: ionic-molecular inclusive materials and complexes with electric charge transfer, structural and dynamic parameters of hydrogen bonds in bioactive materials.
- Investigation of molecular mechanisms of protein interaction, dimerization and functional characteristics of supramolecular structures and molecular complexes. Study of regularities and relationships between structural characteristics and functions of proteins, protein complexes and membrane-protein aggregates. Analysis of the effect of composition and external parameters on the phase state of membranes.
- Determination of structural characteristics and diffusion properties of lipid nanosystems for transport of drugs and nano-drugs.
- Analysis of metamorphic, geodynamic and evolutionary processes in the lithosphere using data on textures of deep-seated and near-surface rocks. Study of regularities in the development of instability of rocks under high temperatures and pressures. Investigation of relationships between seismic anisotropy of lithosphere rocks and textures of minerals, preferentially-oriented cracks and pores.
- Nondestructive testing of residual internal stresses and microstrains in real industrial products and advanced structural materials induced by various technological processes (metal and heat treatment, welding, rolling, stamping, 3D printing, etc.).
- Investigation of relationships between microstructure and thermomechanical properties of advanced functional and structural materials (high-strength steels, aluminum and magnesium alloys, composites, cermets, etc.), analysis of mechanical behavior of structural materials under external influences (load, temperature).
- Analysis of internal structure and construction of 3D models of objects of cultural and natural heritage, industrial materials and products using neutron tomography and radiography data.
- Clarification of mechanisms of radiation damage to solids, obtaining long-life operating data on radiation damage resistance of materials.

**Realization of instrument development program for the IBR-2 spectrometers:**

- Development and construction of elements of basic configuration of a small-angle scattering and imaging spectrometer at beamline 10.
- Development and construction of elements of a neutron guide system for a new inverse geometry inelastic scattering spectrometer.
- Development of neutron guide and detector system for the new DN-6 diffractometer for studies of microsamples, aimed at improving its technical parameters and expanding the available range of high pressures.
- Improvement of technical parameters and expansion of experimental capabilities of the GRAINS multifunctional reflectometer (startup of a new neutron beam chopper, development of electrochemical and liquid cells for conducting experiments).
- Modernization of the available IBR-2 spectrometers (HRFD, RTD, DN-12, YuMO, FSD, REFLEX, REMUR, SKAT, EPSILON) aimed at improving their technical characteristics (enhancement of luminosity, suppression of neutron background, improvement of data acquisition systems and expansion of experimental capabilities).
- Development and construction of a prototype of a small-angle spin-echo scattering spectrometer at beamline 9.
- Improvement of technical characteristics of the radiography and tomography spectrometer at beamline 14 (spatial resolution, radiation resistance of the detector system).
- Upgrade of the FSS correlation spectrometer at beamline 13 and improvement of its technical parameters. Further development of the RTOF correlation method.
- Development of neutron methods for condensed matter research, including spin-echo, neutron standing waves, neutron wave splitting, neutron magnetic resonance, radiography, tomography, and other techniques.

- Development of neutron scattering methods for in-operando monitoring and study of electrochemical materials and interfaces.

### List of projects:

Project	Leader	Priority (period of realisation)
1. Development of an inelastic neutron scattering spectrometer in inverse geometry at the IBR 2 reactor (DINSS)	D.M.Chudoba	1 (2021-2023)

## Development of the IBR-2 Facility with a Complex of Cryogenic Neutron Moderators

**Leaders:** A.V. Vinogradov  
A.V. Belushkin  
A.V. Dolgikh

### Participating countries and international organizations:

Azerbaijan, Belarus, Mongolia, Poland, Romania, Russia, Spain.

### Issues addressed and main goals of research:

The main task of the theme is to increase the efficiency of the use of the IBR-2 facility for realization of the program of experimental investigations, maintenance of operational reliability and safety of the reactor, creation of a complex of cryogenic neutron moderators.

### Expected results in the current year:

- Provision of the IBR-2 reactor operation for physics investigations.
- Check assembling, adjustment and testing of the backup movable reflector MR-3R at the FLNP test bench. Experimental investigations on determination of dynamic characteristics and parameters of vibrations of the units and structure modules at the stage of assembly and bench testing of MR-3R.
- Operation of the test stand of the cryogenic moderator CM-201. Installation of the cryogenic moderator CM-201 in the regular place and putting it into trial operation. Development of requirements specification and project documentation for the cryogenic moderator CM-203 for beamlines 2 and 3.
- Phased replacement and upgrade of the basic technological and electrical safety-related equipment of the IBR-2 facility.

### List of projects:

Project	Leader	Priority (period of realisation)
1. Construction of a complex of cryogenic moderators at the IBR-2 facility	K.A. Mukhin	1 (2014-2022)

### List of Activities:

Activity or Experiment Laboratory or other Division of JINR	Leaders Main researchers	Status
1. Operation of the IBR-2 facility in the regular mode FLNP	A.V. Dolgikh A.V. Vinogradov M.V. Andrianov, A.A. Belyakov, Yu.N. Pepelyshev, S.V. Rudenko, S.A. Tsarenkov, V.A. Trepalin, 30 engineers, 50 workers	Realization
2. Provision of physics research program FLNP	A.V. Vinogradov A.V. Dolgikh A.A. Belyakov, Yu.N. Pepelyshev, S.V. Rudenko, V.A. Trepalin, 30 engineers, 50 workers	Realization

**3. Experiments at the test stand of CM-201 cryogenic moderator. Test operation of equipment of CM-201 cryogenic moderator. Operation of cryogenic moderators using new cryogenic refrigerator by Linde in the regular place**

FLNP

**A.A. Belyakov  
K.A. Mukhin**

Realization

## **Scientific and methodological research and developments for condensed matter investigations with IBR-2 neutron beams**

**Leaders:** V.I. Bodnarchuk  
V.I. Prikhodko

### **Participating countries and international organizations:**

Argentina, Armenia, Belarus, Bulgaria, Czech Republic, Germany, Hungary, Republic of Korea, Romania, Russia, Sweden, Switzerland, Ukraine, United Kingdom, Uzbekistan.

### **Issues addressed and main goals of research:**

Regular operation, modernization and development of control systems for CM-201 and CM-202 cryogenic moderators. Development and equipping of new spectrometers, as well as modernization and reconstruction of equipment for the existing IBR-2 spectrometers in order to improve their parameters, expand experimental capabilities and ensure their faultless operation. Scientific and technical support for the development of beam-forming systems, neutron detectors, sample environment systems, cryostats and cryomagnetic systems, as well as electronics and software of data acquisition systems. Development of FLNP information and computing infrastructure.

### **Expected results in the current year:**

- Maintenance of regular operation of the complex of CM-201 and CM-202 cryogenic pelletized moderators for physics experiments. Automation of the vacuum system and the system for supplying helium to the pneumatic transport pipeline of the CM-202 cryogenic moderator; upgrade of software for control systems of the CM-202 moderator.
- Investigation of radiation resistance of materials using the radiation research facility. Neutron activation analysis of irradiated samples using a high-purity germanium spectrometer.
- Complex calculations and optimization of spectrometers. Methodological studies of neutron background conditions at IBR-2 spectrometers. Determination of sources of neutron background, its level and influence on experimental results.
- Development of the horizontal/vertical cryostat with a superconducting magnet. Development of the available cryogenic test bench for working with liquid helium and its adaptation to produce pure high-pressure helium-3 for filling gas neutron detectors. Modernization of cryostats on neutron beams (at the requests of instrument responsables).
- Manufacturing, installation in the regular position and testing of 4 sectors of the BSD detector at the HRFD diffractometer (work under the BSD project). Study of a prototype of a 2D large-area (~1 m<sup>2</sup>) scintillation detector for small-angle neutron scattering experiments.
- Equipping of the REFLEX spectrometer with a beam monitor (IBR-2 beamline 9).
- Manufacturing of elements of the detector system for the REMUR spectrometer. The first stage of the assembly of the detector system.
- Investigation of solid neutron converters based on boron compounds.
- Calculation and simulation of position-sensitive counters with a resistive anode wire up to 1 m long; development of a detector electronics system.
- Study and use of programmable logic controllers (PLC) for their application in automated control systems for actuators, choppers and current sources; development of a PLC test bench and preparation of proposals for the introduction of PLC at IBR-2 spectrometers. Development of technical specifications for software and user interface for PLC.
- Maintenance and development of the Sonix+ software package at the request of users and in order to improve the internal structure. Upgrade of Sonix+ for the available spectrometers and its installation at new IBR-2 spectrometers.
- Modernization of the FLNP mail system. Development of Wi-Fi network in FLNP buildings. Creation of a server segment of the network with a rate of 10 Gbit/s.

## List of projects:

Project	Leader	Priority (period of realisation)
1. Construction of a wide-aperture backscattering detector (BSD) for the HRFD diffractometer	V.V. Kruglov	1 (2021-2023)

## List of Activities:

Activity or Experiment Laboratory or other Division of JINR	Leaders Main researchers	Status
1. Maintenance of regular operation and development of the complex of CM-201 and CM-202 cryogenic pelletized moderators. Further automation of moderators' control systems.	M.V. Bulavin	Realization
2. Investigation of radiation resistance of materials, electronics and detectors for large-scale physics facilities: ANLAS, CMS, NICA, ITER, ESS, etc.; applied research FLNP	M.V. Bulavin, A.S. Kirilov, A.V. Altynov, K.A. Mukhin, E.P. Shabalin, 8 engineers	
3. Development of VITESS software package and simulation of individual components of spectrometers. Investigation of neutron background conditions at IBR-2 spectrometers, development of recommendations to reduce the background level. FLNP	V.I. Bodnarchuk  2 engineers	Realization
4. Development of the horizontal/vertical cryostat with a superconducting magnet. Development and modernization of cryostats at IBR-2 spectrometers. Modernization of the cryogenic test bench for working with liquid helium. FLNP	A.N. Chernikov S.E. Kichanov  A.P. Bulavin, 1 engineer, 1 laboratory assistant	Realization
5. Completion of development and construction of the BSD detector. Putting the detector into operation at the HRFD diffractometer. Commissioning of the upgraded ASTRA-M detector at FSD. FLNP	V.V. Kruglov A.A. Bogdzal A.S. Kirilov  V.M. Milkov, G.D. Bokuchava, V.G. Simkin, V.A. Drozdov, V.V. Shvetsov, 3 engineers, 4 laboratory assistas	Realization
6. Development and investigation of prototypes of PSD systems based on counters with a resistive anode wire up to 1 m long and large area (~1 m <sup>2</sup> ) scintillation position-sensitive detectors. Development of a 2D PSD with a central opening for a direct beam for	A.V. Churakov V.V. Kruglov A.A. Bogdzal	Realization

## Modern Trends and Developments in Raman Microspectroscopy and Photoluminescence for Condensed Matter Studies

**Leaders:** G.M. Arzumanyan  
N. Kučerka

### Participating countries and international organizations:

Armenia, Belarus, Bulgaria, Cuba, Egypt, Poland, Romania, Russia, Slovakia, Ukraine, Uzbekistan.

### Issues addressed and main goals of research:

Fundamental and applied research in the field of spontaneous and nonlinear Raman microspectroscopy aimed at highly sensitive biosensing. Study of mechanisms and nature of surface-enhanced Raman scattering (SERS) taking into account the anomalous ratio of line intensities in the anti-Stokes and Stokes spectral regions. Development of ultralow-frequency Raman spectroscopy for biomedical purposes, including early diagnostics.

### Expected results in the current year:

- Development of a technique for simultaneous registration of Stokes and anti-Stokes components in SERS spectra.
- Revealing a possible nonlinear dependence of SERS spectra on the pump power.
- Detailed characterization of Raman spectra of liposomes with embedded proteins.
- Search and identification of the Raman marker of NETosis for the purposes of early diagnostics.
- Acquisition and registration of spectra using optics adapted for low-frequency Raman spectroscopy.

### List of projects:

Project	Leaders	Priority (period of realisation)
1. Raman microspectroscopy in biomedical study (Biophotonics)	G.M. Arzumanyan N. Kučerka Deputy: K.Z. Mamatkulov	1 (2021-2023)

### List of Activities:

Activity or Experiment Laboratory or other Division of JINR	Leaders Main researchers	Status
1. Study of the features of Stokes and anti-Stokes components of SERS spectra from analyte molecules in order to understand the processes of enhancement in SERS spectroscopy FLNP	G.M. Arzumanyan  K.Z. Mamatkulov, I.A. Morkovnikov, 2 engineers	Data taking
2. Determination of the range of pump intensities for recording reproducible aSt / St spectra FLNP	G.M. Arzumanyan K.Z. Mamatkulov  M.Yu. Vorobyeva, S.P. Marmakov, 1 engineer	Data taking

3. <b>Stabilization of membrane proteins and studies of their structure using lipodiscs/liposomes by Raman spectroscopy, electron microscopy and SANS</b> FLNP	<b>G.M. Arzumanyan</b> <b>N. Kučerka</b>	Realization Data taking
4. <b>Testing the technique for obtaining Raman spectra of lipodiscs/liposomes with membrane proteins and “empty” lipodiscs/liposomes</b> FLNP	<b>K.Z. Mamatkulov</b> <b>N. Kučerka</b>	Realization
5. <b>Study of the influence of lipid environment on the structure of membrane protein</b> FLNP	<b>G.M. Arzumanyan</b> <b>N. Kučerka</b>	Data taking
6. <b>Search for spectral / Raman markers of NETosis</b> FLNP	<b>G.M. Arzumanyan</b> <b>N. Kučerka</b>	Realization
7. <b>Study of mechanisms of sterile activation of NETosis under UV radiation</b> FLNP	<b>G.M. Arzumanyan</b> <b>K.Z. Mamatkulov</b>	Data taking, Realization
8. <b>Mastering the technique of ultra-low frequency Raman spectroscopy ~ (5-10) cm<sup>-1</sup></b> FLNP	<b>G.M. Arzumanyan</b> <b>K.Z. Mamatkulov</b>	Realization

## Development of the Conceptual Design of a New Advanced Neutron Source at JINR

**Leader:** V.N. Shvetsov

**Participating Countries and International organizations:**

Argentina, Belarus, Czech Republic, France, Germany, Hungary, Romania, Russia, South Africa, Sweden, Uzbekistan.

**Issues addressed and main goals of research:**

Development of the conceptual design of a new advanced neutron source at JINR.

**Expected main results in the current year:**

- Selection of a concept for the new source.
- Publication of a "White book".
- Simulation of the first three instruments for the new source.

**List of Activities:**

Activity or experiment Laboratory or other Division of JINR	Leaders Main researchers
1. Scientific rationale for the creation of the new source, "White book"	V.N. Shvetsov
2. Development and justification of the choice of a conceptual design of a high-flux pulsed neutron source of periodic operation OKSAT NIKIET	V.N. Shvetsov  I.T. Tretiakov, A.V. Lopatkin, A.B. Goryachikh
3. Preparatory work on the manufacturing of fuel loading/target for the new source FLNP  SC "VNIINM"	V.N. Shvetsov  A.V. Vinogradov, A.V. Dolgikh  Yu.A. Ivanov
4. Development of the concept of layout of neutron moderators, neutron beamlines and instruments	V.N. Shvetsov
5. Development of technical specifications for the design of the new source with a suite of research instruments at beamlines FLNP	V.N. Shvetsov  A.V. Vinogradov

## **Development of the SOLCRYS Structural Research Laboratory at the SOLARIS National Synchrotron Radiation Centre**

**Leader:** N. Kucerka

### **Participating Countries and International organizations:**

Belarus, Poland, Russia, Slovakia, Ukraine.

### **Issues addressed and main goals of research:**

The development of a new laboratory for structural research of new materials (catalysts, polymers, etc.), nanomaterials (nanoparticles, nanocomposites, etc.), materials under extreme conditions (superconductors, perovskites, etc.) and biomaterials (proteins, DNA, etc.) utilizing synchrotron X-rays.

### **Expected main results in the current year:**

- Construction of technical infrastructure for the SOLCRYS laboratory.
- Development of a superconducting wiggler, which will produce synchrotron radiation in the range of 5 to 22 keV, to be used by the end stations of the SOLCRYS beamlines.
- Design of experimental beamlines.

### **List of Activities:**

Activity or experiment Laboratory or other Division of JINR	Leaders Main researchers
1. <b>Elaboration and development of technical infrastructure within a scope necessary to install and properly operate the research equipment of the SOLCRYS laboratory</b>	<b>Kucerka N.</b>
2. <b>Design, purchase and installation of a superconducting wiggler as a radiation source in the X-ray range with an upper photon energy of at least 20 keV</b>	<b>Kucerka N.</b>
3. <b>Design, purchase and installation of research lines of synchrotron radiation</b>	<b>Kuklin A.I. Lukin E.V.</b>
4. <b>Design, purchase and installation of measuring stations for diffraction studies and studies of scattering at small angles</b>	<b>Kuklin A.I. Lukin E.V.</b>

**5. Design and assembly of control systems as well as of data acquisition and storage systems**

## **Radiation Physics, Radiochemistry, and Nanotechnology Investigations Using Beams of Accelerated Heavy Ions**

**Leaders:** S.N. Dmitriev  
P.Yu. Apel

### **Participating countries and international organizations:**

Belarus, Bulgaria, China, Cuba, Czech Republic, Germany, Hungary, Kazakhstan, Moldova, Mongolia, Poland, Romania, Russia, Serbia, Slovak Republic, South Africa, Spain, USA, Vietnam.

### **Issues addressed and main goals of research:**

Transition to a new level of research and development in the fields of radiation solid-state physics, applied radiochemistry, and materials science opening the way to nanotechnology applications. The main emphasis will be on the modification of materials in the nanometer range and on the study of the effects produced by heavy ions in matter with the aim of revealing the fundamental mechanisms and developing nanotechnology applications of ion beams. Upgrade of the FLNR equipment for the production of medical isotopes and the development of materials modification methods.

### **Expected results in the current year:**

- Comparative analysis of the radiation stability of Y-Ti(Al)-O nanoparticles in metallic matrices and bulk Y-Ti(Al) oxides against the impact of heavy ions of fission fragments energy.
- Study of mechanical stress profiles in nitrides (AlN, Si<sub>3</sub>N<sub>4</sub>) and carbides (SiC) irradiated with high-energy ions.
- TEM study of gas swelling of ferritic alloys depending on their structural state and their doping conditions with inert gases using homogeneous ion implantation.
- Development and study of ion-selective track-etched membranes.
- Hydrophobization of polyethylene terephthalate track-etched membranes by electron-beam and magnetron deposition of polymers on their surface with a view to obtaining composite membranes for their use in membrane distillation.
- Characterization and production of biodegradable polymer nanofibers by electroforming on the surface of metallized track membranes for medical applications.
- Development of methodological approaches to the creation of technology for manufacturing sterilizing track-etched membranes.
- X-ray fluorescence and gamma activation analysis for estimating the impact of radiological releases from industrial facilities—in particular, coal-fired power plants—on the environment (in cooperation with Mongolia).
- Infrastructure expansion and introduction of new physical and chemical research methods (transmission electron microscopy, thermogravimetry, and measurement of thermo-stimulated currents in dielectrics).

## **Research on the Biological Effects of Heavy Charged Particles of Different Energies**

**Leaders:** E.A. Krasavin  
A.N. Bugay

### **Participating countries and international organizations:**

Armenia, Belarus, Bulgaria, Czech Republic, Cuba, Germany, Italy, Mongolia, Poland, Romania, Russia, Serbia, Slovakia, Vietnam.

### **Issues addressed and main goals of research:**

Theoretical and experimental research on the biological effects of heavy charged particles of different energies at JINR's basic facilities.

The research and development will include:

- Research on the mechanisms of the development of DNA molecular damage and its repair in cultures of human and mammalian normal and tumor cells and in histological sections of tissues of different parts of animals' central nervous system after exposure to radiations of different LET.
- Research on the induction and molecular nature of different types of gene and structural mutations in mammalian and lower eukaryote cells depending on the radiation dose and LET, repair status, oxidative stress development, and genetic stability mechanisms.
- Research on the formation of complex chromosomal aberrations in normal and tumor cells of humans and laboratory animals. Evaluation of long-term consequences of exposure to radiations of different LET.
- Research on behavioral reaction disorders and pathomorphological changes in different structures of the brain, spinal cord, and critical organs and systems of irradiated laboratory animals. Conducting a search for new radioprotective drugs.
- Research on radiation-induced effects in microglia, oligodendrocytes and their precursors, and in the myelin sheath after exposure to densely ionizing radiation.
- Research on the mechanisms of the action of Ara-C and other radiosensitizers for the irradiation of different normal and tumor cell cultures and mice with transplanted tumors.
- Development of an hierarchy of mathematical models of radiation-induced biological effects that would describe the development of radiation-induced pathologies at different organization levels (from molecules to cell populations) and at different times (acute and long-term consequences).
- Improvement of accelerator-based radiobiological experiment procedures. Calculation of shieldings for new nuclear physics facilities; evaluation of the radiation conditions and development of radiation safety systems for them. Participation in the creation and tests of nuclear planetary science instruments.

## Expected results in the current year:

- To identify the patterns of clustered DNA double-strand break (DSB) formation in human skin fibroblast nuclei and radioresistant U87 tumor cells after accelerated heavy charged particle exposure.
- To analyze the formation patterns and structure of complex clustered DNA damage by immunocytochemical staining of the repair proteins  $\gamma$ H2AX, 53BP1, OGG1, and XRCC1 in human fibroblast nuclei after accelerated heavy ion exposure.
- To study the kinetics of clustered DNA DSB repair in human skin fibroblast nuclei and radioresistant U87 tumor cells after accelerated heavy charged particle exposure.
- To study the formation of different DNA damage types (single-strand breaks, base damage, and complex damage) in human fibroblast nuclei after accelerated heavy charged particle exposure.
- To assess the proportion of different DNA DSB repair pathways in human fibroblasts by immunocytochemical staining of the repair proteins RAD51 (HR) and DNA PKcs (NHEJ) after exposure to radiations of different quality.
- To study the formation and repair kinetics of clustered DNA DSBs in neuron precursor cell nuclei and mature neurons and in glial cells of the mammalian central nervous system (CNS) after accelerated heavy charged particle exposure — using the cell subpopulation markers NeuN, doublecortin, GFAP, BrdU, and calbindin.
- To perform experiments to study the expression of the genes encoding the repair proteins (RAD51, DNAPKcs, NBS1, MRE11, etc.) in human skin fibroblasts after accelerated heavy charged particle exposure.
- To study apoptosis induction in human skin fibroblasts and mammalian CNS neurons after accelerated heavy charged particle exposure.
- To study the expression of the genes encoding the proteins and caspases participating in apoptosis induction in human fibroblasts and nerve cells after accelerated heavy charged particle exposure.
- To study in vitro the formation and elimination of DNA DSBs in rat hippocampal cells using a primary hippocampal culture obtained from rats aged P0–P1.
- To identify the patterns of DNA DSB formation in mammalian CNS neurons after  $\gamma$ -ray and accelerated heavy ion exposure.
- To study clustered DNA DSB repair kinetics in mammalian CNS neurons after  $\gamma$ -ray and accelerated heavy ion exposure.
- To study the expression of the genes encoding the repair proteins (RAD51, DNA PKcs, NBS1, MRE11, etc.) in human fibroblasts after exposure to ionizing radiations with different characteristics.
- To continue research on the induction of structural mutations in yeast cells by radiations of different LET.
- To evaluate the action of respiratory impairment caused by mitochondrial DNA damage on sensitivity to radiation's damaging and mutagenic effects.
- To determine the characteristics of the mutations which decrease cells' radiosensitivity.
- To analyze yeast cells' radiosensitivity and genetic stability with the inactivated HAP1 phosphatase.
- To perform PCR analysis of structural damage in the hprt-gene in descendants of irradiated V79 cells.
- To compare structural and chromosomal damage spectra in radiation-induced mutants at different times after exposure.
- To perform metaphase analysis of long-term chromosomal damage after irradiation of *Macaca mulatta* monkeys' head with accelerated carbon and krypton ions.
- To study complex aberration induction in human normal (lymphocytes) and tumor (Cal 51 breast carcinoma) cells by photons, accelerated protons, and accelerated boron and nitrogen ions.
- To perform mFISH and standard metaphase analysis of the induction and elimination (3–6 months after exposure) of chromosomal aberrations in animal bone marrow cells and blood lymphocytes.
- To perform mFISH analysis of chromosomal aberrations induced in human peripheral blood lymphocytes by different types of radiation used in cancer therapy.

- To do mFISH karyotyping and analysis of structural and numerical chromosomal aberrations in different lines of human stem cells cultivated in vitro.
- To conduct premature chromatin condensation research on the induction of chromatin breaks in human normal (lymphocytes) and tumor (Cal 51 breast carcinoma) cells by  $\gamma$ -rays and accelerated protons and ions at different times after exposure.
- By protein extraction, to study inflammatory cytokine secretion in mouse brain homogenates after radiation exposure.
- To study the effect of cytosine arabinoside (Ara-C) on the survival of different mammalian and human normal and tumor cell lines by the criteria of clone formation and apoptosis after exposure to accelerated protons and  $\gamma$ -rays.
- To study the formation and elimination of  $\gamma$ H2AX/53BP1 foci in cultures of U87 glioblastoma cells and cells of other radioresistant tumor lines after exposure to Bragg peak protons and  $\gamma$ -rays — under normal conditions and in the presence of Ara-C ( $\pm$ HU).
- To study DNA DSB formation in different parts of rodent CNS after in vivo irradiation with accelerated protons and  $\gamma$ -rays without radiomodifiers and in the presence of Ara-C ( $\pm$ HU).
- To study the kinetics of DNA single-strand break formation and transformation into DSBs for different types of normal and tumor cells irradiated in the presence and absence of Ara-C ( $\pm$  HU).
- To study the influence of Ara-C ( $\pm$  HU) on the radiosensitizing of normal and tumor cells for different exposure fractionation schemes and different cell hypoxia levels.
- To study modifications of small laboratory animals' behavioral reactions after HCP exposure using the drug AraC. To evaluate the pathological changes in different cell populations of the brain and the possibility of arresting such damage by the neuroprotective drug Cerebrolysin.
- To study morphological and functional changes in the CNS of SD rats and CD-1 mice after accelerated proton exposure.
- To continue research on pathogenesis in different mammalian tissues and organs after heavy charged particle exposure.
- To simulate DNA damage formation and repair after irradiation of normal and tumor cells with heavy charged particles of different energies.
- To simulate the growth of a tumor cell population after ionizing radiation exposure in the presence of DNA synthesis inhibitors.
- To develop a model of the growth of a tumor cell population after ionizing radiation exposure in the presence of metal nanoparticles.
- To continue molecular dynamics modeling of impairments of the structure and functioning of mutant and oxidized forms of proteins.
- To simulate radiation-induced neurogenesis and gliogenesis impairments and neuroinflammatory processes in CNS structures.
- To upgrade the Genome irradiation facility.
- To continue the design, fabrication, testing, and calibration of nuclear planetary science instruments using fast neutron generators at the LRB's test bench.
- To ensure the conduction of radiobiological experiments at the U-400M cyclotron (the Laboratory of Nuclear Reactions) and the medical beam of the Phasotron (the Laboratory of Nuclear Problems).

## **Research on Cosmic Matter on Earth and in Nearby Space; Research on the Biological and Geochemical Specifics of the Early Earth**

**Leaders:**

E.A. Krasavin  
A.Yu. Rozanov  
V.N. Shvetsov

**Participating countries and international organizations:**

Italy, Norway, Poland, Romania, Russia, United Kingdom, USA.

**Issues addressed and main goals of research:****Research and development will include:**

- Biogeochemical studies of cosmic dust
- Studies of microfossils and organic compounds in meteorites and ancient terrestrial rocks
- Studies of cosmic matter with nuclear physics methods
- As a result of studying and generalizing the research materials on modern and fossil cosmic dust as well as ancient terrestrial objects and modern extremophile organisms, data will be obtained on the forms of ancient terrestrial and extraterrestrial life.

**As the results:**

- Obtaining new data on the amount of cosmic matter falling on the whole Earth's surface. Obtaining data on the dynamics of cosmic dust fallout on large territories.
- Evaluation of the following parameters of particles of extraterrestrial origin: morphology, structure, size distribution, and elemental, isotopic, and mineralogical composition. Assessment of changes in these characteristics in different plates in different time intervals.
- Creation of a cosmic dust collection, where dust microparticles will be characterized by quantity (concentration) and the size distribution.
- Obtaining new information on the role of microorganisms in the formation and evolution of life on Earth and processes of weathering, precipitation growth, etc.
- Research on the synthesis of complex prebiotic compounds from formamide under exposure to ionizing radiations of different qualities with meteorite samples as catalysts.
- Generalization of the obtained data on the forms of ancient terrestrial and, possibly, extraterrestrial life.

**Expected results in the current year:**

- To continue the electron microscopy-based search for and study of microfossils in meteorites and terrestrial rocks (mainly Archaean and early Proterozoic).
- To evaluate the elemental composition of cosmic dust in biomonitor mosses with nuclear physics methods.
- To continue the research on the synthesis of complex prebiotic compounds from formamide under exposure to accelerated ions at different temperatures.
- To continue the research on the catalysts participating in the synthesis of complex prebiotic compounds from formamide.
- To process data (electronic microscopy and energy dispersive spectrometry images) for preparing an illustrated atlas of microfossils in carbonaceous chondrites.
- To complete the preparation of an astrobiology textbook

## List of projects:

## Biomedical and Radiation-Genetic Studies Using Different Types of Ionizing Radiation

**Leaders:** G.V. Mitsyn  
S.L. Yakovenko

**Deputy:** S.V. Shvidky

### Participating countries and international organizations:

Belgium, China, Czech Republic, India, Moldova, Poland, Romania, Russia, South Africa, USA.

### Issues addressed and main goals of research:

Mdico-biological and clinical research for the proton radiotherapy of cancer patients. Formation of an experimental data base in the field of radiation mutagenesis in the animal germ cells.

### Expected results in the current year:

- Evaluation of the effectiveness of the conducted radiation treatment of different neoplasms.
- Work to increase the functional capability of the developed 3D treatment planning software.
- Design and construction of the prototype equipment for the dynamic conformal irradiation of deep-seated tumours with the proton beam.
- Development and improvement of detectors and tools for the clinical dosimetry of the medical hadron beams.
- Continuation of research to determine forms of fibroblast cell death depending on the dose of ionizing radiation.
- Study of mechanisms of functional and neurochemical disorders in the central nervous system under the action of radiation with different linear energy transfer.
- Mastering of new methodes for evaluation of the effectiveness of the cytotoxic action of nanoparticles on tumour cells.
- Continuation of the molecular analysis of gamma- and neutron-induced intragenic structural changes in germline cells.
- Continuation of the sequence analysis of inherited DAN changes at the genome level of the offspring.
- Continuation of the work on the analysis of the transcriptome in somatic cells differing in radiosensitivity.
- Assessment of radioresistance of D.melanogaster strains and human cell line HEK293 expressing DSUP protein (gamma rays, protons, heavy ions)/
- Transcriptome analysis of D.melanogaster strains and human cell line HEK293 expressing Dsup protein.
- Study of distribution GEP-Dsup fusion protein on D.melanogater polytene chromosomes.
- Develop a project of specialized isochronous cyclotron for proton therapy.
- Measure the magnetic field of the MC1 bending magnet for the transport line of the AIC-144, Krakow, Poland.

### List of projects:

## Novel Semiconductor Detectors for Fundamental and Applied Research

**Leader:** G.A. Shelkov

**Deputy:** V.A. Rozhkov

### Participating countries and international organizations:

Belarus, CERN, Canada, Croatia, Czech Republic, Cuba, Egypt, Germany, Italy, Israel, New Zealand, Poland, Romania, Russia, South Africa, Switzerland, Ukraine, United Kingdom, USA, Vietnam

### Issues addressed and main goals of research:

Conducting scientific and methodological studies of semiconductor detectors with increased radiation resistance, as well as high-resolution hybrid matrix detectors for high-energy physics and the atomic nucleus.

Development of infrastructure for studies of the properties of semiconductor detectors, including particle beam tests for use by JINR groups and institutes of the participating countries.

Development of scientific cooperation with research institutes to study the possibility of using the developed detectors in other fields of science and technology (primarily in the field of healthcare and mining).

The study of the formation of defects in materials as a result of various physical influences.

Extension of the existing "experimental" base of PAS.

Creation of facilities and experiments on accelerators to obtain new information to verify theoretical ideas in the processes of strong, weak and electromagnetic interactions of elementary particles and light nuclei at intermediate energies.

Creating a setup for carrying out measurements with test electron beams.

### Expected results in the current year:

- Together with physicists from Tomsk, the creation of radiation-resistant modifications of GaAs, including the measurement of their radiation resistance in neutron and electron beams at JINR;
- Creating a prototype module of a compact radiation-resistant electromagnetic calorimeter in conjunction with the FCAL collaboration.
- Development of prototype detectors, electronics based on FPGA and software for Timepix4.
- Development of a prototype and software for the "head" tomograph.
- Organization of collaboration with biophysicists of the Moscow Institute of Physics and Technology and Moscow State University using the MARS microtomograph.
- Completion of the ordering system of the monochromatic positron beam and the commissioning of the PALS spectrometer on a monochromatic positron beam.
- Testing the method of ion etching on the created etching system and applying it to study thin-film multilayer materials.
- Conducting experiments with Active Target (GDH)
- Commissioning of LINAC-200

## List of projects:

## Information and Computing Infrastructure of JINR

**Leader:** V.V. Korenkov

**Deputy:** T.A. Strizh

### Participating Countries and International organizations:

Armenia, Azerbaijan, Belarus, Bulgaria, CERN, China, Czech Republic, Egypt, France, Georgia, Germany, Italy, Kazakhstan, Moldova, Mongolia, Poland, Romania, Russia, Slovakia, South Africa, Sweden, Taiwan, Ukraine, USA.

### Issues addressed and main goals of research:

The purpose of the theme is to develop the network, information and computing infrastructure of JINR for the research and production activities of the Institute and its Member States on the basis of state-of-the-art information technologies in accordance with the Seven-Year Plan for the development of JINR. A particular direction within the theme is the development of the JINR LIT Multifunctional Information and Computing Complex (MICC) presented as a Project.

### Expected main results in the current year:

- Provision of the stable and safe operation of the JINR local network infrastructure and external telecommunication channels (backbone network (2x100 Gbps); transport network of the NICA megaproject (4x100 Gbps); LIT mesh network (100 Gbps); backbone telecommunication channels (3x100 Gbps); Wi-Fi network at the JINR sites) to ensure reliable data exchange between the Institute's subdivisions, the JINR Member States and international organizations collaborating with JINR.

Provision of the full-scale and optimal operation of the guaranteed power supply and climate control systems of the MICC computing infrastructure. Implementation of the project on a new fire safety system of the MICC infrastructure.

Expansion of the performance and the storage system of the MICC basic grid component, i.e. the Tier1 center of the CMS experiment at JINR: processor capacities up to 240 kHS06, dCache storage systems on disks up to 11 PB.

Enlargement of the computing resources and data storage systems as part of the Tier2/CICC integral component: processor capacities up to 130 kHS06, disk storages up to 6 PB.

Transition to new system software: job batch processing system and job schedulers, i.e. HTCCondor and Slurm.

Maintenance of the unified system of access to the CVMFS software.

Support and updates of grid middleware. Support of the operation of WLCG virtual organizations, the NICA experiments and local user groups on the MICC Tier1 and Tier2 resources. Provision of virtual organization services for the NICA experiments and local user groups.

Expansion of the capacity of the general distributed data storage and access system based on the EOS file system at the JINR MICC up to 30 PB. Support of user work with the EOS system at LIT and other JINR subdivisions.

Commissioning of the cloud service for scientific and engineering calculations (<http://saas.jinr.ru>) with a set of applications to study Josephson nanojunctions. Creation of a computing environment prototype for the neutrino experiments, i.e. a neutrino platform. Development of a cloud platform for data analysis and management within the international environmental monitoring and forecasting program. Development of a multifunctional platform and a mobile application for detecting plant diseases on the basis of the cloud infrastructure. Enlargement of the computing part of the MICC cloud component up to 2400 CPU cores and 12 TB of RAM. Increase of the total volume of the ceph-based cloud storage up to 2 PB and the write speed by adding an SSD cache pool. Expansion of the capacity of the JINR cloud due to the resources acquired by the experiments Baikal-GVD, JUNO, NOvA/DUNE and their maintenance. Development of

the distributed information and computing platform based on DIRAC, which integrates cloud resources of the JINR Member States' organizations.

Extension of the computing resources and the hierarchical data storage and processing system of the "Govorun" supercomputer in accordance with the Seven-Year Plan for the development of JINR.

Development of a "computing system on demand" technology for users of the "Govorun" supercomputer based on the mechanism of user application containerization, which will allow one, based on user-defined parameters, to allocate the required number of computing nodes and create a temporary data storage with the required volume and input/output speed under the management of the corresponding file system (NFS, Lustre, EOS, etc.). Development of a system for managing containers with user applications. Stage-by-stage introduction of the hierarchical storage system of the "Govorun" supercomputer into the MICC general data storage and processing system.

Creation of a prototype of the MICC unified resource management system optimizing the efficiency of using computing and storage resources.

Implementation of the system for monitoring the operability and performance of the resources integrated in DIRAC. Integration of new computing and storage resources.

Expansion of the functions of the MICC monitoring system by including the control of the external engineering infrastructure parameters in monitoring: diesel generators, cooling towers, external and internal elements of the cooling system and uninterruptible power supply systems. Development of systems for monitoring and accounting the resources of the "Govorun" supercomputer.

- Development and maintenance of the electronic document system EDS "Dubna", the project management system APT EVM for NICA, the systems ADB2, ISS, "Document Base", HR LHEP at the request of end users and in accordance with the developed concept of the cloud SaaS platform of the unified administrative and business information system. Maintenance of the JINR Information System for Scientific Certification (ISSC). Modernization of the scientific database of the JINR Personal Information System (PIN).

Continuation of work on the transition from 1C MEM to 1C ERP 2.4. Consultation and support for users of information systems based on 1C. Work on the current maintenance, system refinement and user support. Creation of mobile systems for theme management. Continuation of work on enhancing the performance and reliability of the system by optimizing the code used, analyzing long requests, arising locks in the database, as well as by increasing the performance of servers and reallocating the functional performed on them.

Development of the institutional repository of scientific publications based on the Invenio JOIN2 software platform: enrichment and improvement of metadata quality; development of user services; support of normative records.

Maintenance of the libraries of JINRLIB programs and CERNLIB mathematical programs (MATHLIB). Study of the possibility of integrating modern high-level languages (Python, C#) with Fortran for their use of libraries written in Fortran (CERNLIB, JINRLIB).

Development and maintenance of central information servers, portals and databases for information support and software of the LIT and JINR activity: improvement of the presentation and information update on the website of the JINR Dissertation Councils; maintenance and development of services of the "Visit Centre" portal; modernization and administration of the website of the PEPAN and PEPAN Letters journals; development, creation and support of websites of conferences, symposia at the request of the laboratories and other JINR subdivisions; organization of websites of JINR subdivisions and conferences in a hosting mode.

Development of the ecosystem based on the HybriLIT platform for the tasks of machine and deep learning, which allows one to develop neural network models, to conduct their training and provide inference on different computing architectures for the tasks of the NICA project. Development of an information system that provides storage and access to experimental data and their analysis on the basis of machine learning methods for the tasks of radiation biology.

Support of the HLIT-VDI service, which allows platform users to use application packages with an advanced graphics interface, such as Mathematica, Matlab, COMSOL Multiphysics, FLUKA, etc., in their research.

Implementation and support of the “My Account” service for users of the HybriLIT platform, which contains information on work in the system, the statistics on the use of the platform resources, etc.

- Organization and holding of special courses and tutorials on novel HPC technologies, technologies and tools for solving applied problems on the basis of machine and deep learning methods for the Institute’s staff, students and young scientists from the JINR Member States within practices organized by the UC, as well as within conferences and schools organized by JINR. Holding of special courses and tutorials in the JINR Member States in accordance with international cooperation programs. Organization of specialized courses on training IT specialists to solve problems related to data processing and analysis for megascience experiments, including the NICA project.

Holding of schools on artificial intelligence and quantum computing. Creation of a laboratory of intelligent robotics for the development of cognitive control systems on the basis of the NICA accelerator complex and in other JINR laboratories. Development of a laboratory workshop on robotics.

## **Methods, Algorithms and Software for Modeling Physical Systems, Mathematical Processing and Analysis of Experimental Data**

**Leaders:** Gh. Adam  
P.V. Zrelov

**Deputies:** J. Busa  
O. Chuluunbaatar

### **Participating Countries and International organizations:**

Armenia, Belarus, Brazil, Bulgaria, Canada, CERN, China, Czech Republic, France, Georgia, Germany, Hungary, Israel, Italy, Japan, Kazakhstan, Lithuania, Moldova, Mongolia, Poland, Romania, Russia, Slovakia, South Africa, Switzerland, Tajikistan, United Kingdom, USA, Vietnam.

### **Issues addressed and main goals of research:**

Carrying out paramount advanced research in computational mathematics and physics, directed to the creation of new mathematical methods, algorithms, and software for the numerical or symbolic-numerical solution of topics arising in experimental and theoretical physics studies. This subject area includes a wide spectrum of investigations approved for completion in JINR within the seven year period 2017–2023 in high energy physics, nuclear physics, physics of condensed matter and of nanostructures, biophysics, information technologies, the solution of which is inseparable from the use of computing. Such subject matters of the outmost importance in JINR are the NICA project, the neutrino program, the superheavy and exotic nuclei physics, the neutron based investigations. The needed numerical or symbolic-numerical computing will be done on the Multifunctional Information and Computing Complex (MICC), primarily the HybriLIT heterogeneous computing platform which involves the training and test cluster HybriLIT and the "Govorun" supercomputer and the emerging Big Data distributed infrastructure. The research teams include both experienced scientists with outstanding scientific achievements and enthusiastic young scientists and engineers. The requested financing will cover salaries, participations in scientific conferences, scientific visits and the acquisition of a minimal number of personal computers and licenses, within the approved resources for LIT-JINR. A distinctive feature of this research is the close cooperation of the Laboratory of Information Technologies (LIT) with research groups from all JINR laboratories and Member State institutions.

### **Expected main results in the current year:**

- Three-dimensional computer simulation of superconducting magnets for the NICA (JINR) and FAIR (GSI) projects. Construction of maps of the magnetic field distributions in the working areas of the magnets with a view to their further application to simulate physical processes.
- Solution of non-standard magnetostatics problems arising due to ROT asymmetry in the fission of heavy nuclei.
- COMSOL Multiphysics based development of a comprehensive model of an isochronous cyclotron.
- Development of a mathematical model and calculation of beam dynamics in isochronous cyclotrons based on the use of equations of motion.
- Mathematical modeling of magnetic fields in the study of polarization phenomena and spin effects.
- Generalization of the Nambu–Jona-Lasinio model with Polyakov loop enabling analysis of available experimental data on the collision of heavy ions at the NICA energy range.
- Modeling radiation induced changes in structures with defects in the framework of the molecular dynamics method.
- Numerical simulation of effects produced by double femtosecond laser pulses on targets of various compositions.
- Numerical modeling of magnetization reversal in nanomagnetic materials using the chirping effect.
- Computer modeling of quantum solids with dislocations exhibiting superfluid properties.

Investigation of nuclear physics processes within the hybrid microscopic potential using various density models of colliding nuclei.

Numerical study of the structure of phospholipid membranes in vesicular systems based on small-angle neutron and x-ray scattering data.

Development of robust numerical methods for the study of complex processes in layered Josephson structures and systems of superconducting spintronics.

Numerical study of particle-like solutions in multidimensional models of field theory; investigation of solitary waves in condensed matter systems.

Numerical investigation of the essential characteristics of electromagnetic cascade showers in the energy range  $E \geq 10^{15}$  eV.

Search for black-hole-, wormhole- and soliton-like solutions from a self-consistent system of Einstein-Maxwell-Dirac equations.

Upgrade of the SAS primary processing program for the YuMO spectrometer to include anisotropic pattern scattering samples at the position-sensitive detector.

Extension of the FITTER program by increasing the number of theoretical models, improving its performance and GPU interface for experimental data processing.

Development of an extrapolation method within the basic element method (BEM) on non-uniform three-point grids for data processing and the numerical solution of ordinary differential equation problems.

Further BEM application for the processing and analysis of neutron noise of the IBR-2M reactor.

BEM use for the approximation of the dependence of the energy losses of charged particles in the ionization chamber (STAR experiment).

Implementation of Bayesian automatic adaptive quadrature with two interpolatory rules.

Modeling the interaction of electrons with a grating in a free-electron laser of Smith-Purcell type.

Development of methods of extracting the mass spectrum of neutron stars from the comparison of the observations of surface temperature of pulsars with the simulation results of their cooling evolution.

Modeling heavy-ion fragmentation within the combined transport – statistical approach.

Numerical analysis of crystal fields in magnetic rare-earth systems using quantum chemistry methods.

Numerical study of electron scattering through a multiple corrugated graphene structure.

- Tuning of FTF and QGS models of Geant4 for charmed particle production.

Simulation and analysis of nucleus-nucleus interactions at the NICA energy range in the Geant4 FTF and QGS hadronic models.

Further extension of the Monte-Carlo generator of heavy-ion collisions, DCM-SMM, with features asked by the NICA projects.

Use of DCM-SMM for the mass simulation of events for BM@N, SRC and MPD and participation in data analysis within the experiments conducted at these facilities.

Development of detector alignment algorithms for the Time-Projection Chamber of the MPD central barrel.

Further contribution to the development of the complex of databases for the CBM, BM@N and MPD experiments.

Development and implementation of algorithms for data modeling and reconstruction at the BM@N track detectors.

FAIRRoot and Geant4 Monte-Carlo simulation of the experiments with the OLVE-HERO detector prototype during its testing at the SPS accelerator at CERN.

Development of methods and algorithms for identifying the distribution of events with hadronic and electromagnetic showers from arrival directions of cosmic rays recorded by the NUCLEON satellite experiment.

Support for the ATLAS experiment software: development and maintenance of the configuration and management of ATLAS TDAQ, EventIndex for future RUN3, the CREST data format and the CREST client library.

Development of methods for evaluating the characteristics of the Cathode Strip Chambers with updated electronics in the CMS experiment.

Development of models, methods, algorithms and software for the selection of rare processes in the CBM experiment.

- Development of methods and algorithms for machine and deep learning, as well as algorithms based on computer vision for automating the analysis of data from radiobiological studies of laboratory animals and radiobiological experiments.

Development of efficient scalable algorithms based on the neural network approach for reconstructing multiple tracks in high-energy physics experiments, including for the NICA megaproject.

Optimization of the most time-consuming parts of the algorithms used for event modeling and reconstruction in the NICA experiments using high-performance computing techniques such as OpenMP, MPI, CUDA/OpenCL.

Application of machine learning methods for the simulation and analysis of the properties of linear structures in the mass distribution of nuclear reaction products.

Further development of machine and deep learning methods and algorithms for predicting the state of the environment and detecting plant diseases.

Development and implementation of hybrid FEM-BEM algorithms for solving complex nonlinear magnetostatic problems with high-aspect ratio geometries within the COMSOL Multiphysics package.

Development and application of the parallel method of asynchronous differential evolution and other minimization algorithms for the study of multi-parameter models of nuclear physics and condensed matter physics.

Development of methods and software for the high-performance solution of multi-parameter physical models described by systems of nonlinear differential equations (including superconducting processes in Josephson structures and gas-hydrodynamic processes in porous media).

Development and implementation of parallel algorithms and programs for the molecular dynamics modeling of structures with defects on the HybriLIT platform.

Adaptation of the ROOT toolkit designed for the most plausible fitting and modeling of the expected distribution of events in physical analysis for the GPU component of the HybriLIT platform.

Completion of the implementation of the parallel package for heavy-ion collisions on the HybriLIT platform and its inclusion in the JINRLIB library.

Development of parallel algorithms on large-scale random matrices.

Solution of multi-physical problems in the accelerator design, dosimetry and radiation safety.

Development of parallel algorithms and program modules for the high-accuracy solution of nonlinear magnetostatics problems by means of higher-order discontinuous and two-level domain decomposition methods.

Optimization of the parameterization of superdense nuclear matter models in the simulation of heavy-ion collisions and in astrophysical applications.

Use of minimal information entropy as a criterion for selecting a code for an iterative process of decoding low-density parity-check (LDPC) codes.

Development of minimax optimization computational schemes for calculating the relativistic energies of the ground and excited states of single-electron homonuclear superheavy dimers and trimmers.

Numerical simulation of Compton double ionization of helium atoms near the threshold.

Study of the possibility of using Fortran library programs (from JINRLIB, CERNLIB) by modern programming languages (Python, C#).

Development of a prototype of an intelligent monitoring system for distributed computing systems for streaming data (computer infrastructure, data transmission networks, information security).

Application of methods and techniques of machine learning and artificial intelligence for the optimization of the functioning and security of distributed computing for physical experiments.

Development of algorithms for modeling, reconstruction and classification/identification of events, as well as of approaches and methods for the intelligent monitoring of detectors of physical experiments on hybrid systems.

Selection and implementation of a business analytics solution for a heterogeneous computing environment that allows solving the problems of analysis and visualization of the results of physical experiments, monitoring systems and other applications.

Application of the created methods and algorithms of Big Data Analytics for the solution of relevant applied problems from other fields of science, socio-economic research included.

- Analysis of errors caused by the hardware of 5-qubit IBM quantum computers on examples of quantum teleportation of the Bell states.

Development of quantum algorithms for Tensor Networks contractions with the aim at modeling phase transitions in Lattice QCD.

Calculation of non-classicality indicators of low-dimensional quantum systems based on the negativity of the Wigner functions.

Comparative analysis of the separability/entanglement probability with non-classicality indicators for low-dimensional quantum systems.

Application of the method of evolutionary Bogolyubov equations in quantum field theory to the description of open low-dimensional quantum systems.

Development and implementation of algorithms for studying entanglement in models of quantum systems based on unitary representations of wreath products of finite groups.

Development and implementation of new efficient algorithms for investigating and solving systems of nonlinear algebraic equations based on the use of GRID environment resources and on the construction of a new involutive division of monomials.

Development of new finite element schemes enabling collective nuclear spectra estimates.

Derivation of functional equations for 5- and 6-point one-loop Feynman integrals with massive particles.

**Analytical and Methodological Work to Assess the Prospects  
of Scientific Research and Cooperation in the Main Directions  
of JINR's Development.  
Organization of International Cooperation**

**Leader:** A.S. Sorin

**Participating Countries and International organizations:**

Member States of JINR, states participating in JINR activities on the basis of bilateral agreements, international organizations.

**Issues addressed and main goals of research:**

Development of analytical materials concerning prospects of scientific research. Preparation of scientific research plans. Development of science-organization and methodological materials for the special-purpose financing of research areas, themes and projects. Development and application of information systems for the analysis of results of theoretical and experimental research. Organization of international cooperation with the Member States of JINR, with states participating in JINR activities on the basis of bilateral agreements, and with scientific research institutions with which JINR has collaboration agreements.

**Expected results in the current year:**

- Improvement of the organization and coordination of JINR scientific research work.
- Analysis of the results of JINR activities for 2020 in the main research areas.
- Update, administration and support of the electronic system for maintaining the Topical Plan for JINR Research and International Cooperation (Topical Plan). Preparation for the publication of the Topical Plan for the year 2022. Identification of JINR's priority research directions for 2022.
- Development of JINR's grantmaking activities and participation in special-purpose programmes for financing scientific research in 2021.
- Preparation of analytical materials for ministries and agencies.
- Development and promotion of JINR's information resources on the Internet. Support of the system of accounting of protocols on scientific and technological cooperation.
- Promotion of realization of JINR's right to independently confer academic degrees. Support of the operation of JINR's dissertational councils.
- Preparation for the publication of the JINR Annual Report for 2020. Preparation of materials for the INIS system.
- Scientific and organizational support and preparation of materials of JINR's governing and advisory bodies.
- Prompt interaction with representatives of Member States and states participating in the activities of JINR on the basis of bilateral agreements in the fields of scientific research. Organization and holding of meetings of cooperation committees. Interaction with international organizations.

- Organization and holding of contests for JINR Prizes, preparation of materials for nominating candidates for memberships in academies of sciences, for conferring honorary titles, for awarding medals and other decorations.

## **Organization, Support and Development of the JINR Human Resources Programme**

**Leaders:** V.A. Matveev  
S.Z. Pakuliak

### **Participating Countries and International organizations:**

Armenia, Azerbaijan, Belarus, Bulgaria, CERN, Cuba, Czech Republic, Kazakhstan, Moldova, Mongolia, Poland, Romania, Russia, Serbia, Slovakia, South Africa, Ukraine, USA, Vietnam.

### **Issues addressed and main goals of research:**

Development and implementation of the human resources training programmes at JINR aimed at further employment of the trainees as scientific and engineering specialists of the Institute; creation of appropriate conditions for students and PhD students from universities of the Member States to enable them to work on their qualification theses based on the research conducted in the laboratories of the Institute; support of the educational process for students of the JINR-based departments at universities of the Russian Federation, as well as development of network training programmes; organization and running of international student practices and schools for young people from the JINR Member States; training of students, PhD students, and interns on the basis of cooperation agreements with universities of the JINR Member States and international organisations; building and maintenance of laboratory environment intended for hands-on training in accelerator physics, radio-electronics and nuclear physics; support and development of a system of training courses aimed at gaining or improving professional skills and qualifications of JINR technical and engineering personnel; development of the JINR outreach programme and promotion of modern science achievements among school students and teachers, organisation of excursions and online tours of the JINR basic facilities; further development of the JINR educational portal (edu.jinr.ru), development of a set of e-learning courses on the main areas of research conducted at JINR in the official languages of the Institute and by its leading experts; development of virtual and real laboratories allowing students to be trained using modern experimental equipment; participation in science festivals and exhibitions promoting JINR.

### **Expected major results in the current year:**

- Support and supervision of the educational process at the JINR-based departments of Russian universities.
- Support of the system of assigning young researchers to JINR laboratories for preparation of their PhD theses without mastering the academic programmes of the PhD course.
- Organisation and running of the International Student Practices in JINR Fields of Research for students of JINR Member States' universities. Development and management of online student programmes.
- Expansion of the scientific scope and duration of research projects of the Summer Student Programme at JINR and increasing the number of participants in this programme.
- Development of the training facilities, including test-benches and sets of laboratory works, for the needs and tasks of the UC-based Scientific-Engineering Group.
- Organisation of JINR-based internship for participants in the International School of Engineering of Dubna State University.
- Organisation of scientific schools for physics teachers from the Institute Member States at CERN and JINR.
- Launch of virtual tours of JINR and video-conferences with educational institutions of the Member States.

- Development of a set of e-learning courses in nuclear physics, particle physics, condensed matter physics, and JINR basic facilities.
- Promotion of modern educational resources in the JINR Member States.
- Organisation of JINR participation in the Science Festival "NAUKA 0+ 2020" on the basis of Russian universities.
- Development of the language courses programme aimed at teaching Russian, English, French, and German to JINR personnel.
- Participation of JINR in an interdisciplinary social educational project "Summer School 2020".
